commentary provides acupuncture practitioners skeptics and aficionados with a useful overview of acupuncture's past, its current achievements and its promise for the future.

Neurological disorders such as Alzheimer's disease and Parkinson's disease are an important cause of disability and death worldwide and pose a serious burden on the global health system. Over the past 30 years, acupuncture, as the most widely used traditional Chinese medicine therapy in the world, has been widely used in 183 countries and regions. Acupuncture can treat more than 300 kinds of diseases, especially for neurological diseases, due to the unique advantages of acupuncture, such as good therapeutic effect and low side effects. Many researchers have conducted extensive clinical studies on the effectiveness and safety of acupuncture in the treatment of neurological diseases, laying a foundation for the practicability and scientific vigor of this complementary and alternative therapeutic approach. There are still many problems unanswered in the current clinical research on acupuncture for the treatment of neurological diseases. First of all, clinical research is lagging behind due to the lack of emphasis on modern advanced methods and analytical techniques, e.g., artificial intelligence, omics analysis, bioinformatics analysis, data mining, and multidisciplinary integration process. Secondly, the quality of reports on most clinical studies of acupuncture treatment for neurological diseases is extremely low. Most clinical studies have not adopted standardized methodological evaluations, authoritative disease diagnosis standards, and efficacy evaluation standards. The lack of compliance regulations and strict study design reduces the accuracy and authenticity of the research. Thirdly, there is a lack of integrated assessment of the distribution of evidence for acupuncture treatment of neurological diseases. Therefore, strictly designed clinical research and in-depth and systematic analysis methods are currently needed to provide high-quality evidence for acupuncture treatment of neurological diseases. In this research topic, we hope to further understand the role of acupuncture in the treatment of neurological diseases through clinical research and secondary research. The range of acupuncture includes manual acupuncture, electroacupuncture, body needling, auricular acupuncture, scalp acupuncture, laser acupuncture, and acupressure, etc. Neurological diseases include stroke, meningitis, encephalitis, tetanus, Alzheimer's disease, and other dementias, Parkinson's disease, epilepsy, multiple sclerosis, motor neuron disease, migraine, tension-type headaches, headaches from drug overuse, and others.

Neuroimaging plays a crucial role in the diagnosis and prognosis of cerebrovascular diseases by using advanced imaging techniques.

neuroimaging can reveal the anatomical structure and function of the brain providing important evidence for the diagnosis and treatment of cerebrovascular diseases however with the development of new imaging technologies more neuroimaging biomarkers are warranted to be found and evaluated thus further investigation of advanced neuroimaging will improve the diagnosis and prognosis of cerebrovascular diseases by providing detailed brain images and the ability to dynamically monitor changes in the condition providing patients with more effective treatment options and better prognoses this research topic highlights the current progression of applied neuroimaging for the diagnosis and prognosis of cerebrovascular disease including intracranial atherosclerosis carotid atherosclerosis moyamoya vasculopathy cerebral small vessel disease etc topics of interest include but are not limited to the following fields basic studies of neuroimaging biomarkers or imaging technology development to improve the diagnosis and outcome prediction of different kinds of cerebrovascular disease clinical research for the diagnosis and prognosis of cerebrovascular disease using imaging methods including computed tomography ct magnetic resonance imaging mri single photon emission computed tomography spect positron emission tomography pet digital subtraction angiography dsa etc imaging evidence for the effectiveness of medical therapy and novel operative techniques in the management of ischemic or hemorrhagic cerebrovascular disease

acupuncture is widely practised in the 21st century in scientifically developed countries for a wide range of ailments ranging from chronic pain giddiness and high blood pressure to gastrointestinal disorders and sexual dysfunction yet the reasons for its vaunted efficacy remain a matter of controversy in traditional chinese medical theory the mechanism of action in acupuncture was understood in terms of the flow of qi and the balance of yin and yang through the body s meridians a complex network painstakingly charted but never found modern medical researchers have examined old and new needling points and some view them as oc trigger pointsoco that stimulate physiological responses in the body there is also clear evidence of strong placebo effects although it has not been conclusively established that that this is either the main or the only significant effect this volume contains twelve articles covering the latest scientific explanations of the mechanism of acupuncture and critical reviews of clinical trials on its efficacy by leading scholars including edzard ernst at exeter lixing lao at the university of maryland pc leung at the chinese university of hong kong and thomas lundeberg at karolinska institute hong hai is senior fellow at the institute of advanced studies and adjunct professor nanyang technological university singapore and director of the renhai clinic
