prior to the early 1990s the term evolutionary computing ec would have meant little to most practising engineers unless they had a particular interest in emerging computing technologies or were part of an organisation with significant in house research activities it was around this time that the first tentative utilisation of relatively simple evolutionary algorithms within engineering design began to emerge in the uk the potential was rapidly recognised especially within the aerospace sector with both rolls royce and british aerospace taking a serious interest while in the usa general electric had already developed a suite of optimisation software which included evolutionary and adaptiv e search algorithms considering that the technologies were already twenty plus years old at this point the long gestation period is perhaps indicative of the problems associated with their real world implementation engineering application was evident as early as the mid sixties when the founders of the various techniques achieved some success with computing resources that had difficulty coping with the population based search characteristics of the evolutionary algorithms unlike more conventional deterministic optimisation procedures evolutionary algorithms search from a population of possible solutions which evolve over many generations this largely stochastic process demands serious computing capability especially where objective functions involve complex iterative mathematical procedures

metaheuristics exhibit desirable properties like simplicity easy parallelizability and ready applicability to different types of optimization problems such as real parameter optimization combinatorial optimization and mixed integer optimization they are thus beginning to play a key role in different industrially important process engineering applications among them the synthesis

of heat and mass exchange equipment synthesis of distillation columns and static and dynamic optimization of chemical and bioreactors this book explains cutting edge research techniques in related computational intelligence domains and their applications in real world process engineering it will be of interest to industrial practitioners and research academics

evolutionary algorithms are general purpose search procedures based on the mechanisms of natural selection and population genetics they are appealing because they are simple easy to interface and easy to extend this volume is concerned with applications of evolutionary algorithms and associated strategies in engineering it will be useful for engineers designers developers and researchers in any scientific discipline interested in the applications of evolutionary algorithms the volume consists of five parts each with four or five chapters the topics are chosen to emphasize application areas in different fields of engineering each chapter can be used for self study or as a reference by practitioners to help them apply evolutionary algorithms to problems in their engineering domains

hypothesis ii has been augmented by contributions coming from seven countries outside europe the contributions reflect the progress that has been achieved in hydrogen technology aimed primarily at hydrogen as the ultimate energy vector this research have already yielded mature technologies for mass production in many areas these and future results will be of increased interest and importance as global and local environmental issues move higher up the political agenda in order to facilitate new contacts between scientists and strengthen existing ones the symposium incorporated an extensive social program managed by the conference administrator ms ann y stad

this book is written strictly according to the syllabus of gate and is useful for the students of all branches of engineering for whom mathematics is compulsory it focusses on providing good theoretical background in simple manner and explain the concepts through several solved examples questions from previous examinations have been used extensively at the end of each chapter exercises for self practice are included
