Hill, professor at Harvard Business School and renowned leadership scholar, emphasizes that becoming a manager is a complex, dynamic process that involves much more than acquiring technical skills or knowledge. Instead, it requires a fundamental shift in mindset, behaviors, and relationships. The book's central premise is that leadership mastery is a journey characterized by continuous learning, experimentation, and self-awareness. Hill advocates for a practical, hands-on approach—encouraging new managers to view their development as an ongoing process rather than a one-time event. The book serves as a guide, helping managers recognize their initial gaps, confront challenges head-on, and develop the confidence and competence to lead effectively. more than two decades after michael rutter 1987 published his summary of protective processes associated with resilience researchers continue to report definitional ambiguity in how to define and operationalize positive development under adversity the problem has been partially the result of a dominant view of resilience as something individuals have rather than as a process that families schools communities and governments facilitate because resilience is related to the presence of social risk factors there is a need for an ecological interpretation of the construct that acknowledges the importance of people s interactions with their environments the social ecology of resilience provides evidence for this ecological understanding of resilience in ways that help to resolve both definition and measurement problems
