this unique resource brings together valuable information on breed related diseases in one quick reference volume divided into one section for dogs and another for cats inherited and other prevalent disorders are listed breed by breed the final section describes each of the disorders in more detail all the information is drawn from high quality sources including research journals and veterinary texts with extensive references provided this invaluable reference helps veterinary professionals to advise clients on their choice of breed and what problems to look out for whether you re a veterinarian geneticist a breeder or a pet owner this fully referenced book will save you hours of searching through scattered literature

breed predispositions to disease in dogs and cats third edition provides a comprehensive exploration of current knowledge of breed predispositions based on rigorous examination of primary research incorporates the latest research new testing methods and newly discovered predispositions and diseases provides expanded information on genetics epidemiology and longevity includes key characteristics of diseases including pathogenesis genetics risks and common presentations indexes dogs and cats by breed with listings of common inherited and predisposed disorders organized by body system includes absolute and relative frequency occurrence data for conditions along with references to further information

this year marks the 60th anniversary of hla discovery by the french nobel laureate physician jean dausset as well as the 55th anniversary of the identification and naming of the first hla under such circumstances both basic hla research and its clinical applications need a new book that comprehensively reflects the latest achievements in the field thus professor xi as editor has contributed to organize international experts in the areas of hla related basic research and clinical applications to unite their knowledge in chapters covering various related topics and finally to finish the book hla and associated important diseases the book consists of three sections which mainly include basic theoretical and technological developments several important hla associated autoimmune diseases and hla associated infectious diseases

most public discussion has focused on those effects of genetic research that are considered in some way unwanted or unpleasant for example there has been much debate concerning the risks and the ethical appropriateness of genetic screening gene therapy and agricultural applications based on genetic techniques it often claimed that genetic research may cause new problems such as genetic discrimination stigmatization environmental risks or mistreatment of animals genes and morality new essays adopts a critical attitude toward genetic research on both a theoretical and a practical level it presents some of the most important problems in the ethics of genetic engineering including the questions of genetic health and disease genetic testing responsibility for health patenting non human and human life and problems related to the disclosure of genetic information the aim of the book is to focus on real ethical and conceptual issues consider for instance the concept of genetic disease as one of the contributors ingmar pörn writes fear of genetic disease or anxiety is not itself a disease any more than fear of becoming unemployed is a disease alleviating such emotions is not a medical task to be discharged by drug therapy the book also examines the philosophical foundations of these issues by discussing the most influential bioethical theories of today including utilitarianism and principlism
