business and environmental sustainability are not natural bedfellows business is about making money sustainability is about protecting the planet business is measured in months and quarters sustainability often requires significant short term costs to secure a sometimes uncertain long term benefit to some activists all executives are exploitative selfish 1 percenters to some executives all activists are irresponsible unyielding extremists and yet engaging with the issue isn t optional all businesses must have a strategy to deal with sustainability and like any strategy this involves making choices strategy and sustainability encourages its readers to filter out the noise and make those choices in a hard nosed and clear eyed way rosenberg s nuanced and fact based point of view recognizes the complexity of the issues at hand

and the strategic choices businesses must make he blends the work of some of the leading academic thinkers in the field with practical examples from a variety of business sectors and geographies and offers a framework with which senior management might engage with the topic not just to save the planet but to fulfil their short medium and long term responsibilities to shareholders and other stakeholders p

business ethics teaching appears to have had little impact particularly in the light of continued malpractice and misdemeanour in the form of financial scandals environmental disasters and adverse consequences for communities this timely book directly addresses a central question is it that the existence of an ethical or an unethical climate influences behaviour or does the presence or absence of a moral character and personal values have the greatest influence on behaviour at work hemingway proposes four modes of individual moral commitment to corporate social responsibility csr and sustainability the active corporate social entrepreneur the concealed corporate social entrepreneur the conformist and the disassociated hemingway posits that the conformists represent the majority of people in organisations adhering to the prevailing ethical climate whatever that might be however it is the discovery of the corporate social entrepreneur which offers students and scholars a critical alternative and optimistic perspective for the future of ethical business

the growth of the administrative state and legislative gridlock has placed the white house at the center of environmental policymaking every recent president has continued the trend of relying upon administrative tools and unilateral actions to either advance or roll back environmental protection policies from natural resources to climate change and pollution control presidents have more been willing to test the limits of their authority and the role of congress has been one of reacting to presidential initiatives in the administrative presidency and the environment policy leadership and retrenchment from clinton to trump david m shafie draws upon staff communications speeches and other primary sources key features include detailed case studies in public land management water quality toxics and climate policy with particular attention to the role of science in decisionmaking finally he identifies the techniques from previous administrations that made trump s administrative presidency possible shafie s combination of qualitative analysis and topical case studies offers

advanced undergraduate students and researchers alike important insights for understanding the interactions between environmental groups and the executive branch as well as implications for future policymaking

this book collects some recent works on the application of dynamic game and control theory to the analysis of environmental problems this collection of papers is not the outcome of a conference or of a workshop it is rather the result of a careful screening from among a number of contributions that we have solicited across the world in particular we have been able to attract the work of some of the most prominent scholars in the field of dynamic analyses of the environment engineers mathematicians and economists provide their views and analytical tools to better interpret the interactions between economic and environmental phenomena thus achieving through this interdisciplinary effort new and interesting results the goal of the book is more normative than descriptive all papers include careful modelling of the dynamics of the main variables involved in the game between nature and economic agents and among economic agents themselves as well described in vrieze's introductory chapter furthermore all papers use this careful modelling framework to provide policy prescriptions to the public agencies authorized to regulate emission dynamics several diverse problems are addressed from global issues such as the greenhouse effect or deforestation to international ones such as the management of fisheries to local ones for example the control of effluent discharges moreover pollution problems are not the only concern of this book

the field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors the problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive system these problems must be solved in order to produce integrated cognitive models of moderately complex tasks architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional

processes because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller this book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models it will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors contributors kevin a gluck jerry t ball michael a krusmark richard w pew chris r sims vladislav d veksler john r anderson ron sun nicholas l cassimatis randy j brou andrew d egerton stephanie m doane christopher w myers hansj rg neth jeremy m wolfe marc pomplun ronald a rensink hansj rg neth chris r sims peter m todd lael j schooler wai tat fu michael c mozer sachiko kinoshita michael shettel alex kirlik vladislav d veksler michael j schoelles jerome r bussemeyer eric dimperio ryan k jessup jonathan gratch stacy marsella glenn gunzelmann kevin a gluck scott price hans p a van dongen david f dinges frank e ritter andrew l reifers laura cousino klein michael j schoelles eva hudlicka hansj rg neth christopher w myers dana ballard nathan sprague laurence t maloney julia trommershäuser michael s landy a hornof michael j schoelles david kieras dario d salvucci niels taatgen erik m altmann richard a carlson andrew howes richard l lewis alonso vera richard p cooper and michael d byrne
