and pharmacology of lichen is ideal for scientists and researchers in ethnobotany pharmacology chemistry and biology as well as teachers and students with an interest in biologically important lichens it is gratifying to see the enthusiasm of indian mycologists for lichens grow over the last 25 years especially in their possible exploitation that this book has a staggering 63 contributors of which all but seven are from india or pakistan is a testament to that enthusiasm following a series of nine chapters on general aspects of lichen biology conservation and ecology are ten on different aspects of actual or prospected applications these cover traditional uses therapeutic potential of bioactive compounds antioxidant properties antimicrobial activities anticancer drugs food value perfumery and cosmetics bioindication and nanoparticles one contribution compiles ethnobotanical and pharmacological properties of four particular genera *Cetraria* *Cladonia* *Parmelia* *Sclerogium* and *Usnea* the compilations of pertinent very scattered publications and reports will be of value for anyone wishing to explore particular activities further especially as starting points for fresh research however it has to be recognized that many of the studies commented on especially in relation to potential medical applications are based on individual rather small scale studies and not always on precisely identified material further in many chapters published reports are carefully compiled but generally accepted without indications of their limitations i was concerned to see that in the chapter on taxonomy lichens were not presented from the standpoint of the phylogenetic placements of the fungal partners to which the lichen name applies instead it is Zahlbruckner's system that is used treating them as a separate group divided into ascolichens basidiolichens and categories such as *Gymnocarpeae* in justification they say this has been widely adopted by all british lichenologists and give a reference to a 1959 publication it is sad to see such obsolete treatments being perpetuated as in addition to misleading readers it may inhibit them from looking into what is known of the activities and properties of related non lichen fungi and their products there are also inconsistencies in the scientific names used and erratic use of author citations which in any case have no place in nontaxonomic works it is unfortunate that a work on a subject of such potentially wide interest was evidently not as critically reviewed and edited to the standard i would have expected from such a prestigious and respected publisher david l hawksworth
