it has long been recognized that the landscape of Britain is one of the richest historical records we possess but just how old is it the fields of Britannia is the first book to explore how far the countryside of roman Britain has survived in use through to the present day shaping the character of our modern countryside commencing with a discussion of the differing views of what happened to the landscape at the end of roman Britain the volume then brings together the results from hundreds of

archaeological excavations and palaeoenvironmental investigations in order to map patterns of land use across roman and early medieval britain in compiling such extensive data the volume is able to reconstruct regional variations in romano british and early medieval land use using pollen animal bones and charred cereal grains to demonstrate that agricultural regimes varied considerably and were heavily influenced by underlying geology we are shown that in the fifth and sixth centuries there was a shift away from intensive farming but very few areas of the landscape were abandoned completely what is revealed is a surprising degree of continuity the roman empire may have collapsed but british farmers carried on regardless and the result is that now across large parts of britain many of these roman field systems are still in use
