this book details the design for a smaller living space you can adjust the plans to meet your desires and needs if this book says to do something one way and you want to do it another way investigate how to do it another way and then do it that way hopefully this idea will encourage your own ideas and hopefully it will more than halve the carbon footprint of a typical home in the us 5 000 square feet may sound like a lot of space until you realize we're talking about land area and that 10 000 sq ft is the typical size of a city residential lot 10 000 sq ft is a little less than 1/4 acre so 5 000 sq ft would be half that much or about 1/10 acre since we're reducing the land area by 1/2 we should also reduce the house and the car by 1/2 the not so big house reduced houses to about

2000 sq ft in this project we will go even further reducing the house to 500 sq ft many starter homes modulars trailer homes and two bedroom apts are 1000 sq ft large rv s and houseboats are about 1000 sq ft or less 500 sq ft is the size of a small 1 bedroom apt or a large studio apt we could make the house 1000 sq ft by giving it a basement or a second floor but we want to reduce the amount of house we have to heat cool clean and maintain some of things i ve designed to maximize the space in your home and garage have yet to be invented if they are never invented there is still plenty of room in both the house and the garage the inventions just give you that much more space one of these inventions is the car the car is a modular car meaning it comes in pieces or modules which can be easily taken apart and put back together the main module or cab of the car holds 2 people and a few groceries most of the time the only module you need is the main module the other two modules are a back seat and an enclosed truck bed or van module you can even attach all three modules together and still have a car that is small enough to fit easily in a 1 car garage
