machines have always gone hand in hand with the cultural development of mankind throughout time a book on the history of machines is nothing more than a specific way of bringing light to human events as a whole in order to highlight some significant milestones in the progress of knowledge by a complementary perspective into a general historical overview this book is the result of common efforts and interests by several scholars teachers and students on subjects that are connected with the theory of machines and mechanisms in fact in this book there is a certain teaching aim in addition to a general historical view that is more addressed to the achievements by homo faber than to those by homo sapiens since the proposed history survey has been developed with an engineering approach the brevity of the text added to the fact that the authors are probably not competent to tackle historical studies with the necessary rigor means the content of the book is inevitably incomplete but it nevertheless attempts to fulfil three basic aims first it is hoped that this book may provide a stimulus to promote interest in the study of technical history within a mechanical engineering context few are the countries where anything significant is done in this area which means there is a general lack of knowledge of this common cultural heritage

the topic of this volume is the teaching and learning practices in the major and minor academic centers of renaissance europe and their relevance for early modern intellectual history academic knowledge is here regarded not as a finished product but as a process induced by multiple factors and several conditions the personalities and intellectual profiles of teachers and learners the dialectic between their respective interests and roles the institutional context from the immediate one given by the particular school or university with their courses and curricula to the more remote one given by governing political power or surveilling religious authority or the interplay between the two last but not least one should consider the several impulses of an epoch that seem to impart to the historical course a sudden acceleration inducing decisive sometimes disruptive changes to intellectual development the spread of humanistic culture the religious reformation and its consequences the encounter with new epistemologies the access to education of new social subjects and behind all these and as their common catalyst the progressive establishment of the press as a means of learning consolidation and dissemination

the printed book caused an explosion of knowledge and major changes in the perception of texts in investigating how knowledge was presented to the early modern reader this volume treats both book historical issues and the intersections of layout with issues of genre content and function
