this book develops a new theory about the challenges of transferring and sharing knowledge across organizational borders knowledge transfer refers to processes through which actors and organizational units exchange receive and are influenced by the experience and knowledge of others and can manifest itself through changes in the knowledge bases and performance of recipients the capacity of an organization to transfer and exploit knowledge from other organizations is a key to its competitiveness progress and survival thus imitation is an important prerequisite for innovation however effective knowledge transfer is incredibly challenging it sometimes succeeds but it frequently fails over the last 30 years considerable research efforts have been made to identify the factors

that account for the variations in outcomes of knowledge transfer processes chapter 2 of this book contains a comprehensive review of transfer theories and research findings however despite great research efforts and many new insights much of the variation in knowledge transfer processes and outcomes remains unexplained which calls for a re theorizing of the subject this book offers a new and fresh reframing of knowledge transfer across organizational borders based on extensive research it outlines a new theory that conceptualizes knowledge transfer between organizations as acts of translation resembling the translation of language and texts the author shows how involved actors translation competence is a key to better understanding variations in knowledge transfer processes and outcomes thus this new reframing both extends and challenges established theories of knowledge transfer

the pressing need to break the silence on non consensual sex among young people an issue shrouded by denial underreporting and stigma is self evident despite the growing body of research regarding young people s sexual behaviours the study of coercive sexual experiences has generally been overlooked by both researchers and national programmes available evidence has been scattered and unrepresentative and despite this evidence non consensual sex among young people is perceived to be a rare occurrence this volume dispels any such misconception it presents a disturbing picture of non consensual sex among girls as well as boys and among married as well as unmarried young women in a variety of settings this volume documents moreover the expanse of non consensual experiences that young people face from unwanted touch to forced penetrative sex and gang rape although the focus is on young females the volume also sheds light on the experience of young males as both victims and perpetrators this pioneering volume highlights key factors placing young people at risk whilst outlining the significant distinctive health and social implications they face sex without consent also documents the unsupportive and sometimes abusive or negligent roles of families teachers health care providers and law enforcement agents outlines promising efforts intended to prevent non consensual sex or support survivors and argues for profound changes in norms and values that tolerate or encourage non consensual sex the editors based at the population council new delhi the world health organization geneva and family health international virginia argue compellingly for a radical review and reform of existing programmes designed to prevent this kind of abuse and to support young survivors of sexual trauma in the

developing world addressing the magnitude determinants and consequences of sex without consent this volume provides evidence based directions for programming

this research monograph describes the integration of analogical and case based reasoning into general problem solving and planning as a method of speedup learning the method based on derivational analogy has been fully implemented in prodigy analogy and proven in practice to be amenable to scaling up both in terms of domain and problem complexity in this work the strategy level learning process is cast for the first time as the automation of the complete cycle of construction storing retrieving and flexibly reusing problem solving experience the algorithms involved are presented in detail and numerous examples are given thus the book addresses researchers as well as practitioners

the large lakes of the east african rift valley are among the oldest on earth and are vital resources for the people of their basins they are unique among the large lakes of the world in terms of their sensitivity to climatic change rich and diverse populations of endemic species circulation dynamics and water column chemistry and long continuous records of past climatic change a comprehensive study of the large african lakes is long overdue the scientific justification for such an effort is noted in the previous paragraph and is illustrated in great detail in this volume societal need for the sustainable utilization of these lakes offers an even more compelling reason for examination of biological food webs water quality and past climate variability in east africa the lakes provide the most important source of protein for the people of the african rift valley and fish populations are shifting dramatically in response to fishing pressure introduction of exotic species land use impact on water quality and perhaps climatic change current estimates of primary productivity the underpinning of the food resource are extremely crude and based on only a few spot measurements

secrets of creativity what neuroscience the arts and our minds reveal draws on insights from leading neuroscientists and scholars in the humanities and the arts to probe creativity in its many contexts in the everyday mind the exceptional mind the scientific mind the artistic mind and the pathological mind components of creativity are specified with respect to types

of memory forms of intelligence modes of experience and kinds of emotion authors in this volume take on the challenge of showing how creativity can be characterized behaviorally cognitively and neurophysiologically the complementary perspectives of the authors add to the richness of these findings neuroscientists describe the functioning of the brain and its circuitry in creative acts of scientific discovery or aesthetic production humanists from the fields of literature art and music give analyses of creativity in major literary works musical compositions and works of visual art

genome stability from virus to human application second edition a volume in the translational epigenetics series explores how various species maintain genome stability and genome diversification in response to environmental factors here across thirty eight chapters leading researchers provide a deep analysis of genome stability in dna rna viruses prokaryotes single cell eukaryotes lower multicellular eukaryotes and mammals examining how epigenetic factors contribute to genome stability and how these species pass memories of encounters to progeny topics also include major dna repair mechanisms the role of chromatin in genome stability human diseases associated with genome instability and genome stability in response to aging this second edition has been fully revised to address evolving research trends including crisprs cas9 genome editing conventional versus transgenic genome instability breeding and genetic diseases associated with abnormal dna repair rna and extrachromosomal dna cloning stem cells and embryo development programmed genome instability and conserved and divergent features of repair this volume is an essential resource for geneticists epigeneticists and molecular biologists who are looking to gain a deeper understanding of this rapidly expanding field and can also be of great use to advanced students who are looking to gain additional expertise in genome stability a deep analysis of genome stability research from various kingdoms including epigenetics and transgenerational effects provides comprehensive coverage of mechanisms utilized by different organisms to maintain genomic stability contains applications of genome instability research and outcomes for human disease features all new chapters on evolving areas of genome stability research including crisprs cas9 genome editing rna and extrachromosomal dna programmed genome instability and conserved and divergent features of repair

this comprehensive book is based on the navier stokes and other continuum equations for fluids it interprets the analytical and numerical solutions of the equations of fluid motion

topics included are turbulence and how why and where it occurs mathematical apparatus used for the representation and study of turbulence continuum equations used for the analysis of turbulence ensemble time and space averages as they are applied to turbulent quantities the closure problem of the averaged equations and possible closure schemes fourier analysis and the spectral form of the continuum equations both averaged and unaveraged nonlinear dynamics and chaos theory

based on years of instruction and field expertise this volume offers the necessary tools to understand all scientific computational and technological aspects of speech processing the book emphasizes mathematical abstraction the dynamics of the speech process and the engineering optimization practices that promote effective problem solving in this area of research and covers many years of the authors personal research on speech processing speech processing helps build valuable analytical skills to help meet future challenges in scientific and technological advances in the field and considers the complex transition from human speech processing to computer speech processing

originally published in 2005 this book examines how regional industries use different networks on various geographical scales in order to withstand increasing competition in a globalising world it argues that new forms of global governance of networked industries are

emerging in particular in those areas that have only recently been incorporated into the global economy such as eastern europe asia and southern africa the book addresses a number of issues including the different forms of institutional arrangements that contribute to the formation of heterogeneous global industrial networks it also raises the issue of national institutions that still matter in network formation the focus of the book is on how to improve regional and sectoral competitiveness in a global context and it suggests this is best achieved by a close analysis of global linkages an evolutionary perspective on processes taking place and a more differentiated view on globalisation

respiration in archaea and bacteria summarizes the achievements of the past decade in the biochemistry bioenergetics structural and molecular biology of respiratory processes in selected groups of prokaryotes it includes a series of chapters providing an extensive coverage of the respiratory membrane bound bacterial redox complexes and enzymes it also covers evolution of respiration cytochrome c biogenesis bacterial haemoglobins and oxidases as redox sensors

this book presents the select proceedings of the 48th national conference on fluid mechanics and fluid power fmfp 2021 held at bits pilani in december 2021 it covers the topics such as fluid mechanics measurement techniques in fluid flows computational fluid dynamics instability transition and turbulence fluid structure interaction multiphase flows micro and nanoscale transport bio fluid mechanics aerodynamics turbomachinery propulsion and power the book will be useful for researchers and professionals interested in the broad field of mechanics

When somebody should go to the book stores, search foundation by shop, shelf by shelf, it is essentially problematic. This is why we give the ebook compilations in this website.
