metaphor has been studied as a linguistic conceptual and communicative phenomenon in a wide range of disciplines including linguistics literary studies philosophy education political science media studies communication science psychology and neurosciences while the cognitive theory of metaphor has dominated the field since the cognitive turn in the 1980s alternatives have been proposed including the neural theory of metaphor the relevance theory approach the complex systems approach and the dynamic systems approach though studies are still often text based there is a growing body of research on visual metaphor multimodal metaphor and gestural metaphor as well as experimental research ranging from studies on metaphor processing and comprehension to studies in nlp and machine learning metaphor studies is thus a highly interdisciplinary field that encompasses a myriad of theories approaches and methods in current metaphor research each of these strands is facing new challenges and offering new venues of cutting edge research using state of the art technologies researchers tend to focus on their own research areas and provide in depth views within the scope of their own disciplines metaphor studies do not seem to escape this phenomenon in spite of the large number of disciplines they draw on

ranging from linguistics to psychology to the theory of science hence there seem to be little cooperation and communication across different fields methods and approaches having metaphors and figurative language as their main object of investigation this research topic aims to promote cross fertilization among the many research areas involved in metaphor studies thus bringing together different methods and perspectives and offering a comprehensive overview of the possible research scenarios

forlaget beskriver an interdisciplinary approach to the qualitative analysis of human movement the authors explain how to blend experience and sport science to improve movement the accompanying cd rom is designed to help the user improve their observational and analytical skills

this volume is the most comprehensive overview to date of sociologically orientated approaches to text and discourse analysis and is worth reading even for those who are interested only in purely linguistic approaches to text and discourse its main merit i think is that it introduces approaches which up to now have hardly been admitted into the universe of scientific discourse discourse studies methods of text and discourse analysis provides the most comprehensive overview currently available of linguistic and sociological approaches to text and discourse analysis among the 10 linguistic and sociological models surveyed in this book some of the more important are grounded theory content analysis conversation analysis and critical discourse analysis the book presents each approach according to a standardised format which allows for direct systematic comparisons the fully annotated lists of sources provide readers with an additional means of evaluation of the competing analytical methods interdisciplinary and international in its aims methods of text and discourse analysis suggests the benefits both linguists and sociologists will derive from a more intimate knowledge of each others methods and procedures

this book is devoted to the study of an effective frequency domain approach based on systems control theory to compute and analyze several types of standard bifurcation conditions for general continuous time nonlinear dynamical systems a very rich pictorial gallery of local bifurcation diagrams for such nonlinear systems under simultaneous variations of several system parameters is presented some higher order harmonic balance approximation formulas are derived for analyzing the oscillatory dynamics in small neighborhoods of certain types of hopf and degenerate hopf bifurcations the frequency domain approach is then extended to the large class of delay differential equations where the time delays can be either discrete or distributed for the case of discrete delays two alternatives are presented depending on the structure of the underlying dynamical system where the more general setting is then extended to the case of distributed time delayed systems some representative examples in engineering and biology are discussed

this book provides a comprehensive introduction to the latest advances in the mathematical theory and computational tools for modeling high dimensional data drawn from one or multiple low dimensional subspaces or manifolds and potentially corrupted by noise gross errors or outliers this challenging task requires the development of new algebraic geometric statistical and computational methods for efficient and robust estimation and segmentation of one or multiple subspaces the book also presents interesting real world applications of these new methods in image processing image and video segmentation face recognition and clustering and hybrid

this edited volume compiles a series of chapters written by experts of isotopic analysis in order to highlight the utility of various isotope systems in the reconstruction of past human behaviors rather than grouping contributions by specific isotopes or analytical techniques as many isotope review articles are arranged the volume organizes chapters by broadly defined themes of archaeological research these include paleodiet and life histories human animal interactions and migration and mobility in this sense the book is arranged with the intent of being as much question based as method based chapters under these themes provide background information on the principles of the techniques and on the theoretical underpinnings of the research yet they are written with the non specialist in mind and attempt to convey these ideas clearly and succinctly in addition to the case studies and reviews three chapters provide greater context to the field of isotopic archaeology discussing its history basic principles and future potential the volume aims to serve as a reference source for students and practicing archaeologists seeking to apply isotopic studies to their own research projects or to act as a reader for courses in archaeological science chapter 6 is available open access under a creative commons attribution 4 0 international license via link [springer.com](https://www.springer.com)
