the three coeditors knew john butterworth for many years and had worked closely with him on a number of research projects we respected him as a valuable colleague and friend we were greatly saddened by his untimely death this book is an attempt to remember him we dedicate the volume to john with thanks for the contributions he made to our research to the faculty of commerce and business administration at the university of british columbia and to the accounting profession this volume contains twelve invited papers on the general topic of the economic theory of information and contracts we asked leading scholars who had known john to contribute papers the response was very gratifying the authors provided us with new strong research papers that should make a lasting contribution to the accounting and information economics research literature and make us all proud to have put this volume together the research papers in the volume are in three sections information evaluation in multi person contexts contracting in agencies under moral hazard and contracting in agencies with private information we begin part i with jerry feltham's review of john butterworth's pioneering contributions to the accounting and information economics literature this is followed by an introduction to the papers in the volume and the papers themselves

this volume contains edited versions of 11 contributions given by main speakers at the nato advanced study institute on real and complex dynamical systems in hillerød denmark june 20th july 2nd 1993 the vision of the institute was to illustrate the interplay between two important fields of mathematics real dynamical systems and complex dynamical systems the interaction between these two fields has been growing over the years problems in real dynamical systems have recently been solved using complex tools in the real or by extension to the complex in return problems in complex dynamical systems have been settled using results from real dynamical systems the programme of the institute was to examine the state of the art of central parts of both real and complex dynamical systems to reinforce contact between the two aspects of the theory and to make recent progress in each accessible to a larger group of mathematicians

this study allows readers to get to grips with the conceptual tools and practical techniques for building robust machine learning in the face of adversaries

this book constitutes the proceedings of the 22nd conference on integer programming and combinatorial optimization ipco 2021 which took place during may 19 21 2021 the conference was organized by georgia institute of technology

and planned to take place in Atlanta, GA, USA but changed to an online format due to the COVID-19 pandemic.
