enhancing situation awareness sa is a major design goal for projects in many fields including aviation ground transportation air traffic control nuclear power and medicine but little information exists in an integral format to support this goal designing for situation awareness helps designers understand how people acquire and interpret information in complex settings and recognize the factors that undermine this process designing to support operator sa reduces the incidence of human error which has been found to occur largely due to failures in sa whereas many previous human factors efforts have focused on design at the perceptual and surface feature level sa oriented design focuses on the operator s information needs and cognitive processes as they juggle to integrate information from many sources and achieve multiple competing goals thus it addresses design from a system s perspective by applying theoretical and empirical information on sa to the system design process human factors practitioners can create designs to support sa across a wide variety of domains and design issues this book serves as a helpful reference to that end
