The Institute of Chemical Physics of the Russian Academy of Sciences has become one of the world's premiere centers for studies of polymeric materials in use during processing and in harsh environments. The Institute's focus is on commercially available materials and their modifications to improve performance through advanced theoretical analysis and implementation of experimental results. Selected papers from the Institute have been incorporated into five sections: stabilization and degradation, biochemistry, photochemistry, rheology, and flame retardancy, and should provide invaluable background to producers of polymeric materials.

A volume of selected original papers on the synthesis of the two fundamental forces of nature. It is intended to provide graduate students and physicists in the field with an easy access to the original literature.

This volume has two main components: reports and testimonies. Both will allow the reader to know how this new field of physics was opened, how it gave rise to new technological developments now still of great value for electron and muon detection, and how much work was needed for the peculiar symmetry to be so short-lived.
