the majority of medical errors are non technical in nature stemming from faulty decision making asynchronous information gathering lack of situational awareness and ineffective communication and team leadership reviews of accidents from other high risk industries including the airline industry have had similar findings this led the national aeronautics and space administration nasa and the airline industry to develop crew now crisis resource management crm training these team based training strategies address non technical skills to counteract human error and improve team and patient safety medicine has begun adapting this training especially within the realms of anesthesia and critical care trauma surgery has been slower to utilize this work however simulation based training is increasing in popularity the first edition of trauma team dynamics was a revolutionary book in the field of trauma care it was the first text that

integrated the complexities of trauma care but illustrated how these could be streamlined and improved through a team based focus and training. CRM and team based training has grown substantially in the past six years since this text was conceived and there have been significant developments both in the breadth of the training as well as refinement in the topics covered, teaching methods utilized and strategies employed to overcome the multitude of challenges still faced in this area. The second edition of this text expands greatly on the initial CRM topics covered in the opening section of the book. Hot topics in CRM training including the concepts of followership and conflict resolution and highlights strategies such as mindfulness and others to manage stress and reduce burnout are discussed. The text also expands into novel areas of trauma care including less invasive bedside endovascular treatments such as REBOA, resuscitative endovascular balloon occlusion of the aorta and a more in depth discussion of telereuscitation and trauma care in austere environments. Featuring 28 new chapters, the second edition of *Trauma Team Dynamics* is written by experts in trauma, critical care, emergency medicine, nursing, respiratory therapy and pre-hospital care and includes NASA and United States military affiliated experts. It is intended for use as both a day to day clinical resource and a reference text and includes self assessment questions as well as guidance on CRM curriculum design and implementation.

Published in partnership with the American Pediatric Surgical Nurses Association (APSNA), *Nursing Care of the Pediatric Surgical Patient*, third edition, is the must have resource for all healthcare providers involved in the care of the general pediatric surgical patient, representing the educational mission of APSNA to improve the nursing care of pediatric surgical patients. This textbook includes information on pre and post operative care, minimally invasive surgery, innovative therapies, surgically treated congenital anomalies, pediatric solid tumors and care of tubes, drains, wounds and ostomies. This text teaches readers how to be technologically savvy, clinically competent and able to tend to emotional and psychosocial needs of the child and family. Completely updated and revised, this new edition includes an expanded focus on topics such as organ transplantation, pain, bowel management and fluid and electrolytes.

This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and potentially improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS) course, *Trauma Team Dynamics* illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation from the scene through pre-hospital care and transport to the trauma bay and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy and pre-hospital care and include NASA and United States military affiliated experts. *Trauma Team Dynamics* is intended for use as both a day to day clinical resource and a reference text and includes self assessment questions as well as guidance on CRM curriculum design and implementation.

written by international leaders in trauma surgery this comprehensive text spans the entire field of trauma from the composition and practice of the trauma team to management of all injuries seen in a trauma setting the fully searchable online text is also available on a companion site
