the latin america and the caribbean lac region has proved to be relatively resilient in the face of increased debt stress stubborn inflation and uncertainty arising from the russian invasion of ukraine income and employment have largely recovered from the pandemic poverty has receded and markets remain guardedly optimistic about the near future however global uncertainty is rising including a recent wave of bank failures in the us and europe strengthening resilience both on the health and macroeconomic fronts will be paramount progress remains pending in both vaccination coverage and health system preparedness while the institutionality of macroeconomic policy in some countries is being questioned the evolution of the global economy is providing two new areas of opportunity for the region the trend toward nearshoring moving production closer to the us and european markets and the imperative to combat climate change which is giving the

region a new comparative advantage in sun wind hydro and natural capital taking advantage of these will require greater integration into the global economy yet paradoxically in the face of these opportunities lac is becoming less integrated trade intensity has largely stagnated and foreign direct investment fdi to most countries has declined beyond the long term structural reforms needed to reduce systemic risk raise the level and quality of education invest in infrastructure and ensure well functioning financial markets this report calls to preserve the reputational gains of the past 20 years in terms of macro stability and streamlining regulation dealing with customs and transport to lower the cost of doing business in the region export promotion agencies and investment promotion agencies can also help as they have proven track records a comprehensive approach to both shorter and longer term reforms could move lac toward a renewed and more dynamic engagement with the global economy

energy consumption and its management have been clearly identified as a challenge in computing and communication system design where energy economy is obviously of paramount importance for battery powered devices this thesis addresses the energy efficiency of mobile communication at the user end in the context of cellular networks we argue that energy efficiency starts by energy awareness and propose energybox a parametrised tool that enables accurate and repeatable energy quantification at the user end using real data traffic traces as input energybox offers an abstraction of the underlying states for operation of the wireless interfaces and allows to estimate the energy consumption for different operator settings and device characteristics the tool is used throughout the thesis to quantify and reveal inefficient data communication patterns of widely used mobile applications we consider two different perspectives in the search of energy efficient solutions from the application perspective we show that systematically quantifying the energy consumption of design choices e g communication patterns protocols and data formats contributes to a significantly smaller energy footprint from the system perspective we devise a cross layer solution that schedules packet transmissions based on the knowledge of the network parameters that impact the energy consumption of the handset these attempts show that application level decisions require a better understanding of possible energy apportionment policies at system level finally we study the generic problem of determining the contribution of an entity e g application to the total energy consumption of a given system e g mobile device we compare the state of the art policies in terms of fairness leveraging cooperative game theory and analyse their required information and computational complexity we show that providing incentives to reduce the total energy consumption of the system as part of fairness is tightly coupled to the policy selection our study provides guidelines to select an appropriate policy depending on the characteristics of the system
