the authors initially planned to write an article describing the origins and developments of the theory of fredholm operators and to present their recollections of this topic we started to read again classical papers and we were sidetracked by the literature concerned with the theory and applications of traces and determinants of infinite matrices and integral operators we were especially impressed by the papers of poincare von koch fredholm hilbert and carleman as well as f riesz s book on infinite systems of linear equations consequently our plans were changed and we decided to write a paper on the history of determinants of infinite matrices and operators during the preparation of our paper we realized that many mathematical questions had to be answered in order to gain a more complete understanding of the subject so we changed our plans again and decided to present the subject in a more advanced form which would satisfy our new requirements this whole process took between four and five years of challenging but enjoyable work this entailed the study of the appropriate relatively recent results of grothendieck ruston pietsch hermann konig and others after the papers gk1 and gk2 were published we saw that the written material could serve as the basis of a book

this paper analyzed the determinants of india s virtual water trade in crops and crop products for the period 2001 to 2020 the study used product data at the 6 digit level of commodity classification covering 206 commodities traded across 218 partner countries analysis shows that india has a favorable virtual water trade balance and terms of trade with its partner countries among the commodities traded rice accounted for over one fourth of the total volume of virtual water exported and sunflower safflower oil constitute over one third of the total volume of virtual water imported no consistent pattern was observed with regard to the level of endowment of water resources of export destination countries gravity model results revealed as expected that partner countries gdp and population size had a positive effect on virtual water exports while distance had a negative effect the coefficient of membership in a free trade agreement fta was negative and statistically significant implying that fta member countries are sensitive to the trading of water intensive agricultural products the effect of amount of arable land on virtual water exports was negative this implies that larger virtual water exports correlate with land constraints in a destination country that impede domestic agricultural production the water endowment variables did not show any significant relationship with virtual water export flows which confirms the finding in the literature that the water stress of a partner countries does not affect the direction of virtual water flows

this book studies the measurement and the determinants of systemic risk paying special attention to the role of the credit default swaps cdss either as financial instruments containing valuable information about the soundness of the reference institutions or as a market whose distress contributes to potential systemic shocks on the economy the measurement of systemic risk is addressed from two perspectives aggregate and individual contribution to systemic risk where the former refers to the level of systemic risk in the overall economy and the latter to the individual contribution of each financial institution to the overall systemic risk the analysis of the determinants of the individual contribution of financial institutions to systemic risk focuses on the effect of their portfolio holdings of derivatives finally this thesis studies the liquidity commonalities and their determinants in the corporate cds worldwide markets the main participants in these markets are systemically important financial institutions sifis and so abrupt changes in the market liquidity could cause systemic shocks on the overall economy and as a consequence could have adverse effects on global stability

for decades health professionals have asserted the importance of public participation in interventions for health medicine has pursued patient participation in clinical decision making in the public health realm target groups have been asked to assist in the design and implementation of initiatives for health in practice however patients and populations expect health professionals to give advice and in some cases to make decisions on their behalf this implies limits to the ideal of participation in this innovative work the author contrasts public and professional understandings of health and the best ways to achieve health the result is a model of lay participation in the structuring of medical and public health activity the book is unique due to its policy applicable quantitative studies and its theoretical analysis of works by rené dubos and aaron antonovsky it will be of value to professionals in health promotion health education medical anthropology and social epidemiology

it is well established that the social determinants of health sdh highly influence health outcomes and inequities this is particularly true in low and middle income countries where women are deprived of their basic rights including access to health services appropriate nutrition and education socio cultural practices such as child marriages forced marriages cousin marriages female genital mutilation and son preference undermine women health and well being additionally various negative stereotypes such as pregnancy and childbirth related taboos dowry and honor related violence restrictions on women s mobility and social participation are significantly associated with women s health status to improve women s sexual and reproductive health societies must take comprehensive and integrated measures to address these cultural stereotypes and harmful sociocultural practices against women a sdh approach dictates that health is shaped importantly by various individual factors and community norms that further enable or constrain health individual factors include education income

ethnicity and the environment wherein people live including their families communities and workplace macro level social factors include the labor market schools healthcare systems legal systems institutionalized practices and ideologies in many low and middle income countries women are still socially excluded and economically marginalized they lack opportunities for education economic growth and political participation there are many social drivers associated with maternal health many negative life experiences such as infertility and perinatal loss poverty discrimination social inequalities lack of autonomy violence economic dependency and isolation have long lasting impact on mothers mental health and wellbeing to comprehensively understand the drive of maternal health a multilevel and bio social approach of social determinants of women s health is integral

this phd thesis reports eight studies into the determinants of ecstasy use behaviours although all prior quantitative studies into ecstasy use determinants have examined the generic behavioural category using ecstasy these studies may not be able to inform the development of interventions aiming to prevent ecstasy use or to promote cessation the studies reported in this thesis indicate that the key determinants of using ecstasy are not also the key determinants of trying out ecstasy and ceasing ecstasy use furthermore ecstasy use cessation usually seems to be prompted by life style changes e g job work relationships losing interest in the dance scene rather than by fear of ecstasy s health effects this means that health promotion efforts would do better to adopt a harm reduction approach rather than to focus on abstinence the current thesis reports the studies on which these conclusions are based and the first study into the determinants of a harm reduction strategy

this book explores in depth the factors determining economic development in the arab region the particular factors relevant to the arab world are also set within the context of the broad political economy of underdevelopment the factors are identified as comprising three main groups economic political administrative and socio cultural petroleum and regional arab economic development are examined separately the force and operation of each determinant is further assessed in the context of the individual countries from which the author is able to arrive at some important conclusions concerning the interaction of these determinants and their impact upon development first published in 1978

intra industry trade iit has emerged as a major area of research in the analysis of international and intra regional specialization this book highlights the changes which the indian economy has witnessed in the past two decades following the economic liberalization of the 1990s it has been revealed that there are comparatively few studies in the context of developing economies which focus on the country industry specific determinants of aggregate and sectoral iit the book incorporates several hypotheses to analyze demand driven supply induced industry specific and policy oriented drivers influencing the level of bilateral aggregate and sectoral iit in the indian context moreover several trade related labor specific and trade overlap induced factors dictate the growth trajectory and the employment level of an economy therefore the current research conducts an empirical analysis to examine each hypothesis and provide significant findings to explore the relationship between key economic variables their interaction effects and their impact on the growth of the indian economy
