hyperbolic partial differential equations describe phenomena of material or wave transport in physics biology and engineering especially in the field of fluid mechanics the mathematical theory of hyperbolic equations has recently made considerable progress accurate and efficient numerical schemes for computation have been and are being further developed this two volume set of conference proceedings contains about 100 refereed and carefully selected papers the books are intended for researchers and

graduate students in mathematics science and engineering interested in the most recent results in theory and practice of hyperbolic problems applications touched in these proceedings concern one phase and multiphase fluid flow phase transitions shallow water dynamics elasticity extended thermodynamics electromagnetism classical and relativistic magnetohydrodynamics cosmology contributions to the abstract theory of hyperbolic systems deal with viscous and relaxation approximations front tracking and wellposedness stability of shock profiles and multi shock patterns traveling fronts for transport equations numerically oriented articles study finite difference finite volume and finite element schemes adaptive multiresolution and artificial dissipation methods

this groundbreaking work is the most detailed carefully researched and comprehensive analysis of the evolution of nazi policy from the persecution and ethnic cleansing of jews in 1939 to the final solution of the holocaust in 1942

this book discusses a variety of topics related to industrial and applied mathematics focusing on wavelet theory sampling theorems inverse problems and their applications partial differential equations as a model of real world problems computational linguistics mathematical models and methods for meteorology earth systems environmental and medical science and the oil industry it features papers presented at the international conference in conjunction with 14th biennial conference of isiam held at guru nanak dev university amritsar india on 2 4 february 2018 the conference has emerged as an influential forum bringing together prominent academic scientists experts from industry and researchers the topics discussed include schrodinger operators quantum kinetic equations and their application extensions of fractional integral transforms electrical impedance tomography diffuse optical tomography galerkin method by using wavelets a cauchy problem associated with korteweg de vries equation and entropy solution for scalar conservation laws this book motivates and inspires young researchers in the fields of industrial and applied mathematics

this book was first published in 1991 it considers the concepts and theories relating to mostly aqueous systems of activity coefficients

with its over thousand detailed and expansive footnotes drawing on twenty four different archive collections in eight countries and three continents and an enormous secondary literature this is one of the best researched regional studies of the holocaust ever to appear it is helped by the fact that the authors are also always so cognizant of what was happening elsewhere in europe at the same time and thus frequently draw out the relationship between seemingly haphazard local decisions and

trends across europe indeed the way in which the book makes sense of complex institutional behavior is at times breathtaking the precision in the detail and the scope of the contextualization make this one of the more important works to appear on the holocaust in recent years english historical review this very readable and well documented study fills an important gap in the holocaust literature it offers insight into the microcosm reflecting the entire terrifying and murderous scenario of the ss state frankfurter allgemeine zeitung this excellent study of the riga ghetto informed by eastern european sources and available now in english translation provides a precise and ghastly description of what the liquidation meant for the local jews with laudable thoroughness they describe the organized shooting of jews the first form of industrial scale mass murder the new york review of books ghetto forced labor camp concentration camp all of the elements of the national socialists policies of annihilation were to be found in riga this first analysis of the riga ghetto and the nearby camps of salaspils and jungfernhof addresses all aspects of german occupation policy during the second world war drawing upon a broad array of sources that includes previously inaccessible soviet archives postwar criminal investigations and trial records of alleged perpetrators and the records of the society of survivors of the riga ghetto the authors have produced an in depth study of the riga ghetto that never loses sight of the latvian capital s place within the overall design of nazi policy and the all of europe dimension of the holocaust andrej angrick a native of berlin is a historian consultant and researcher affiliated with the hamburg foundation for the promotion of science and culture he has published numerous articles about the holocaust in the soviet union and co edited der dienstkalender heinrich himmlers 1941 42 1999 and die gestapo nach 1945 karrieren konflikte konstruktionen with klaus michael mallmann 2009 as well as besatzungspolitik und massenmord die einsatzgruppe d in der s dlichen sowjetunion 1941 1943 2003 peter klein a berlin based historian consultant and researcher affiliated with the hamburg foundation for the promotion of science and culture has published widely on the holocaust and german occupation in various parts of central and eastern europe during the second world war klein was the editor of die einsatzgruppen in der besetzten sowjetunion 1941 1942 1997 and a co editor of der dienstkalender heinrich himmlers 1941 42 1999 he is the author of gettoverwaltung litzmannstadt 2009 ray brandon is a freelance translator historian and researcher based in berlin a former editor at the frankfurter allgemeine zeitung english edition he is co editor with wendy lower of the shoah in ukraine history testimony memorialization

small angle scattering of x rays saxs and neutrons sans is an established method for the structural characterization of biological objects in a broad size range from individual macromolecules proteins nucleic acids lipids to large macromolecular

complexes saxs sans is complementary to the high resolution methods of x ray crystallography and nuclear magnetic resonance allowing for hybrid modeling and also accounting for available biophysical and biochemical data quantitative characterization of flexible macromolecular systems and mixtures has recently become possible saxs sans measurements can be easily performed in different conditions by adding ligands or binding partners and by changing physical and or chemical characteristics of the solvent to provide information on the structural responses the technique provides kinetic information about processes like folding and assembly and also allows one to analyze macromolecular interactions the major factors promoting the increasingly active use of saxs sans are modern high brilliance x ray and neutron sources novel data analysis methods and automation of the experiment data processing and interpretation in this book following the presentation of the basics of scattering from isotropic macromolecular solutions modern instrumentation experimental practice and advanced analysis techniques are explained advantages of x rays rapid data collection small sample volumes and of neutrons contrast variation by hydrogen deuterium exchange are specifically highlighted examples of applications of the technique to different macromolecular systems are considered with specific emphasis on the synergistic use of saxs sans with other structural biophysical and computational techniques

chapters highlight two explicitly numerical applications a predictor convex corrector method and the galerkin approximation in hyperbolic partial differential equations this book will prove useful to practicing engineers population researchers physicists and mathematicians

final solution is an intelligent and thought provoking short history of the holocaust by historian david cesarani employing an insightful judeocentric perspective the book casts a fresh look upon one of history s most terrifying periods this compelling narrative uncovers the threads of untold stories using diaries and letters from within ghettos and camps these precious documents mostly in polish and yiddish were previously largely inaccessible to anglo american scholars by adopting a rigorously judeocentric approach the whole narrative of the march to genocide and its aftermath the book presents a subtly different timeline and engenders a significant re evaluation of the how and why final solution provides a powerful re assessment of the genocide of world war ii avoiding overstated theories about the guilty it redefines who shares the guilt shedding light on the subtleties that contributed to such horrifying events
