everything you want to know see and find out about earth a visually amazing encyclopedia all about earth crammed full of incredible stuff to dip into from magnificent meteorites to cool caves crystals and coral reefs all revealed in a fascinating exciting totally different way it s like a museum a search engine and the world s most exciting geography field trip rolled into one loads of earth related topics hundreds of pictures thousands of words and squillions of amazing things to discover and explore so find it see it know it

the invasion of land by ocean dwelling plants and animals was one of the most revolutionary events in the evolution of life on earth yet the animal invasion almost failed twice because of the twin mass extinctions of the late devonian epoch some 359 to 375 million years ago these catastrophic events dealt our ancestors a blow that almost drove them back into the sea if those extinctions had been just a bit more severe spiders and insects might have become the ecologically dominant forms of animal life on land this book examines the profound evolutionary consequences of the late devonian extinctions which shaped the composition of the modern terrestrial ecosystem only one group of four limbed vertebrates now live on earth while other tetrapod like fishes are extinct this gap is why the idea of fish with feet seems so peculiar yet these animals were once a vital part of our world

achieving food water security to the underdeveloped countries restoration of the heavily polluted rivers in the developing and underdeveloped countries and actions by all countries of the world to limit adverse impacts of the climate change within safe limits are the imminent needs before the living world all countries would have to come together to disperse dark clouds of these catastrophic calamities looming large on the horizon before they overshadow our living world role of developed

countries and countries with emerging economies is most vital in this respect if these countries treat themselves as a part of the world family in guiding and assisting their weak younger brothers to gain strength all problems before the family would be solved let us hope that wisdom would prevail and we would save our living world from leading to the man made holocene mass extinction

the earth that sustains us today was born out of a few remarkable near catastrophic revolutions started by biological innovations and marked by global environmental consequences the revolutions have certain features in common such as an increase in complexity energy utilization and information processing by life this book describes these revolutions showing the fundamental interdependence of the evolution of life and its non living environment we would not exist unless these upheavals had led eventually to successful outcomes meaning that after each one at length a new stable world emerged the current planet reshaping activities of our species may be the start of another great earth system revolution but there is no guarantee that this one will be successful the book explains what a successful transition through it might look like if we are wise enough to steer such a course this book places humanity in context as part of the earth system using a new scientific synthesis to illustrate our debt to the deep past and our potential for the future

for all that we have dicovered thousands of planets around other stars life in the luxurious abundance and complexity it has achieved on earth may be a rarity soon after humans arrived a mere blink of an eye ago in geological terms we began to encroach on nature and how we are in full scale assault on the biosphere mark williams and jan zalasiewicz trace how life change the earth and the havoc humans have wreaked upon it but also show ways in which we might use our imaginations and technological skills to enhance our lives while protecting the cosmic oasis on which we and all living things coexist book jacket
