photochemistry a term that broadly speaking includes photophysics is a branch of modern science that deals with the interaction of light with matter and lies at the crossroads of chemistry physics and biology however before being a branch of modern science photochemistry was and still is today an extremely important natural phenomenon when god said let there be light photochemistry began to operate helping god to create the world as we now know it it is likely that photochemistry was the spark for the origin of life on earth and played a fundamental role in the evolution of life through the photosynthetic process that takes place in green plants photochemistry is responsible for the maintenance of all living organisms in the geological past photochemistry caused the accumulation of the deposits of coal oil and natural gas that we now use as fuels photochemistry is involved in the control of ozone in the stratosphere and in a great number of environmental processes that occur in the atmosphere in the sea and on the soil photochemistry is the essence of the process of vision and causes a variety of behavioral responses in living organisms photochemistry as a science is quite young we only need to go back less than one century to find its early pioneer 1 the concept of coordination compound is also relatively young it was established in 1892 when Alfred Werner conceived his theory of metal complexes 2 since then the terms coordination compound and metal complex have been used as synonyms even if in the last 30 years coordination chemistry has extended its scope to the binding of all kinds of substrates 3 4

this volume contains invited papers and communications presented at the second world congress and fourth european workshop meeting on new developments in selective oxidation the purpose of the meeting was to present new topics and recent advances as well as the discussion of new aspects of fundamental and applied aspects of partial selective oxidation in heterogeneous and homogeneous catalysis the following topics were discussed new processes for fine chemicals by catalytic oxidation recent developments in surface chemistry of oxide catalysts novel catalytic systems and preparation methods heterogenized homogeneous oxidation catalysts selective oxidation and oxidative dehydrogenation of alkanes new industrial developments based on catalytic oxidation reactions bio photo and electro catalytic oxidation oxidation by other agents than dioxygen
