popular science gives our readers the information and tools to improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better

chemical structure and bonding the scope of the series spans the entire periodic table and addresses structure and bonding issues associated with all of the elements it also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures physical and spectroscopic techniques used to determine examine and model structures fall within the purview of structure and bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant the individual volumes in the series are thematic the goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are

emerging that are of interest to a larger scientific audience thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole the most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed a description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere the coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented discussion of possible future research directions in the area is welcomed review articles for the individual volumes are invited by the volume editors

this handbook brings together under a single cover all aspects of the chemistry physics and engineering of surfaces and interfaces of materials currently studied in academic and industrial research it covers different experimental and theoretical aspects of surfaces and interfaces their physical properties and spectroscopic techniques that have been applied to a wide class of inorganic organic polymer and biological materials the diversified technological areas of surface science reflect the explosion of scientific information on surfaces and interfaces of materials and their spectroscopic characterization the large volume of experimental data on chemistry physics and engineering aspects of materials surfaces and interfaces remains scattered in so many different periodicals therefore this handbook compilation is needed the information presented in this multivolume reference draws on two decades of pioneering research on the surfaces and interfaces of materials to offer a complete perspective on the topic these five volumes surface and interface phenomena surface characterization and properties nanostructures micelles and colloids thin films and layers biointerfaces and applications provide multidisciplinary review chapters and summarize the current status of the field covering important scientific and technological developments made over past decades in surfaces and interfaces of materials and spectroscopic techniques with contributions from internationally recognized experts from all over the world fully cross referenced this book has clear precise and wide appeal as an essential reference source long due for the scientific community the complete reference on the topic of surfaces and interfaces of materials the information presented in this multivolume reference draws on two decades of pioneering research provides multidisciplinary review chapters and summarizes the current status of the field covers important scientific and technological developments made over past decades in surfaces and interfaces of materials and spectroscopic techniques contributions from internationally recognized experts from all over the world

sepsis is a very important public health problem it is widely acknowledged that the severe inflammatory response syndrome severe sepsis paradigm fails to stratify sepsis patients adequately this book reviews in detail how sepsis should be managed on the basis of a novel approach to staging the piro predisposing factors infection response organ dysfunction model was first proposed at the start of the decade on a theoretical basis and has now been translated into a practical approach for use at the bedside it is loosely based on the tnm staging system for cancers with points being allocated to each of the four aforementioned key characteristics of the septic process the proposed piro framework facilitates evaluation of factors that are important in the pathogenesis of severe sepsis and in the development of treatment strategies this book clearly explains the advantages of the piro approach in different settings and will be of value to all practitioners concerned with the management of sepsis

this book on migraine is the first machine generated scientific book in medicine published by springer nature and reflects a new publication format which focuses on literature reviews state of the art computer algorithms were applied to select relevant sources from springer nature journal articles rearrange them in a topical order and provide short summaries of these articles the result is the auto summarization of current texts organized by means of a similarity based clustering routine in coherent chapters and sections the human intervention of a world renowned expert in this field grants the scientific soundness and appropriate organization of the contents identified the ai based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary as is migraine the most important among the chronic non communicable diseases under the age of 50s the result of this innovative process will be of help especially for readers with limited time interested in migraine and wishing to learn more about the subject quickly and particularly if they are new to the topic springer nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to master or phd thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples

this publication provides a state of the art overview of key issues related to antimicrobial resistance

including a focus on key pathogens causing common healthcare associated and community acquired infections the epidemiology and therapeutic considerations of these antimicrobial resistant organisms are discussed as well as the clinical and heal

the articles in this book summarize the work presented at the final workshop of the cost european cooperation in the field of scientific and technical research action on molecular materials and functional polymers for advanced devices which was held in june 2000 in patras greece the collection gives an excellent overview of the state of the art in this field and the progress made by the coordinated research projects the results range over the synthesis physical properties and applications of molecular materials nanotubes fullerenes phthalocyanines inorganic and inorganic organic hybrid materials and functional polymers electronic conduction photoluminescence optical storage photovoltaic devices
