this volume contains intense studies on quantum groups knot theory statistical mechanics conformal field theory differential geometry and differential equation methods and so on it has contributions by renowned experts and covers most of the recent developments in these fields

beginning with 1981 merger decisions of the corporation are published separately as vol 2 of the annual report

this series encompasses design synthesis application and analytical methods including clinical and in vitro for the study of these critical interactions as our understanding of the genome and proteome expands general developments in the field of dna sequence specific interaction are likely to play an increasingly important role accordingly manuscripts have been solicited from experts covering a diverse range of fields reflecting the cross disciplinary and dynamic nature of the series volume 4 describes work on the modification of dna by at specific anticancer drugs dna alkylation events which involve metabolite generation dna sequence recognition by two selective binders bulged dna microenvironments as molecular targets dna sequence specific binding by short peptides and the analysis of dna protein interactions using dnase i footprinting methodology features include expert contributors from the biomedical world emerging areas of drug design and therapeutic applications nucleic acid protein interactions color graphics of molecular modeling analyses new and emerging methodologies

with the mapping of the partition function graphs of the n vector magnetic model in the n to 0 limit as the self avoiding walks the conformational statistics of linear polymers was clearly understood in early seventies various models of disordered solids percolation model in particular were also established by late seventies subsequently investigations on the statistics of linear polymers or of self avoiding walks in say porous medium or disordered lattices were started in early eighties inspite of the brilliant ideas forwarded and extensive studies made for the next two decades the problem is not yet completely solved in its generality this intriguing and important problem has remained since a topic of vigorous and active research this book intends to offer the readers a first hand and

extensive review of the various aspects of the problem written by the experts in the respective fields we hope the contents of the book will provide a valuable guide for researchers in statistical physics of polymers and will surely induce further research and advances towards a complete understanding of the problem first book on statistics of polymers in random media contents straight away from research labs chapters written by foremost experts in the respective fields theories experiments and computer simulations extensively discussed includes latest developments in understanding related important topics like dna unzipping travelling salesman problem etc comprehensive index for quick search for keywords

whether the fossil record should be read at face value or whether it presents a distorted view of the history of life is an argument seemingly as old as many fossils themselves in the late 1700s georges cuvier argued for a literal interpretation but in the early 1800s charles lyell s gradualist view of the earth s history required a more nuanced interpretation of that same record to this day the tension between literal and interpretive readings lies at the heart of paleontological research influencing the way scientists view extinction patterns and their causes ecosystem persistence and turnover and the pattern of morphologic change and mode of speciation with stratigraphic paleobiology mark e patzkowsky and steven m holland present a critical framework for assessing the fossil record one based on a modern understanding of the principles of sediment accumulation patzkowsky and holland argue that the distribution of fossil taxa in time and space is controlled not only by processes of ecology evolution and environmental change but also by the stratigraphic processes that govern where and when sediment that might contain fossils is deposited and preserved the authors explore the exciting possibilities of stratigraphic paleobiology and along the way demonstrate its great potential to answer some of the most critical questions about the history of life how and why do environmental niches change over time what is the tempo and mode of evolutionary change and what processes drive this change how has the diversity of life changed through time and what processes control this change and finally what is the tempo and mode of change in ecosystems over time

first published in 1999 this book explores the ethnic dimension of democratic peace agenda in new democracies the democratic peace proposition concerns the fact that free peoples make good neighbours how does it apply intra nationally within multiethnic states does the establishment of a constructive and peaceful pattern of ethnic conflict management have anything to do with the type of rule what tasks and dilemmas must be dealt with in order to promote a more positive and stable relationship of peace in democratizing multiethnic systems the author searches for answers to these and other topical questions to underscore the linkage between ethnopolitical crises change and choice the case study section examines the meanings articulations dynamics and character of ethnic peace in four post soviet cases estonia lithuania moldova russia with particular focus on areas factors and patterns of critical choice in the realms of institutions and interactions at the onset and at critical junctions of the democratization dynamic

my goal is to show the reader that the soviet political and economic system was unstable by its very nature it was just a question of when and how it would collapse from the introduction to collapse of an empire the soviet union was an empire in many senses of the word a vast mix of far flung regions and accidental citizens by way of conquest or annexation typical of such empires it was built on shaky foundations that instability made its demise inevitable asserts yegor gaidar former prime minister of russia and architect of the shock therapy economic reforms of the 1990s yet a growing desire to return to the glory days of empire is pushing today s russia backward into many of the same traps that made the soviet union untenable in this important new book gaidar clearly illustrates why russian nostalgia for empire is dangerous and ill fated dreams of returning to another era are illusory attempts to do so will lead to defeat gaidar uses world history the soviet experience and economic analysis to demonstrate why swimming against this tide of history would be a huge mistake the ussr sowed the seeds of its own economic destruction and gaidar worries that russia is repeating some of those mistakes once again for example the nation is putting too many eggs into one basket leaving the nation vulnerable to fluctuations in the energy market the soviets had used revenues from energy sales to prop up struggling sectors such as agriculture which was so thoroughly ravaged by hyperindustrialization that the soviet union became a net importer of food when oil prices dropped in the 1980s that revenue stream diminished and dependent sectors suffered heavily although strategies requiring austerity or sacrifice can be politically difficult russia needs to prepare for such downturns and restrain spending during prosperous times collapse of an empire shows why it is imperative to fix the roof before it starts to rain and why so
