a brief historical account of the background leading to the publication of the first four editions of the world directory of crystallographers was presented by g boom in his preface to the fourth edition published late in 1971 that edition was produced by traditional typesetting methods from compilations of biographical data prepared by national sub editors the major effort required to produce a directory by manual methods provided the impetus to use computer techniques for the fifth edition the

account of the production of the first computer assisted directory was described by s c abrahams in the preface of the fifth edition computer composition which required a machine readable data base offered several major advantages the choice of typeface and range of characters was flexible corrections and additions to the data base were rapid and once established it was hoped updating for future editions would be simple and inexpensive the data base was put to other union uses such as preparation of mailing labels and formulation of lists of crystallographers with specified common fields of interest the fifth edition of the world directory of crystallographers was published in june of 1977 the sixth in may of 1981 the subject indexes for the fifth and sixth editions were printed in 1978 and 1981 respectively both having a limited distribution

constitutive of reference in laboratory sciences as cultural sign systems and their manipulation and superposition collectively shared classifications and associated conceptual frameworks and various forms of collective action and social institutions this raises the question of how much modes of representation and specific types of sign systems mobilized to construct them contribute to reference semioticians have argued that sign systems are not merely passive media for expressing preconceived ideas but actively contribute to meaning sign systems are culturally loaded with meaning stemming from previous practical applications and social traditions of applications in new local contexts of application they not only transfer stabilized meaning but also can be used as active resources to add new significance and modify previous meaning this view is supported by several analyses presented in this volume sign systems can be implemented like tools that are manipulated and superposed with other types of signs to forge new representations the mode of representation made possible by applying and manipulating specific types of representational tools such as diagrammatic rather than mathematical representations or berzelian formulas rather than verbal language contributes to meaning and forges fine grained differentiations between scientists concepts taken together the essays contained in this volume give us a multifaceted picture of the broad variety of modes of representation in nineteenth century and twentieth century laboratory sciences of the way scientists juxtaposed and integrated various representations and of their pragmatic use as tools in scientific and industrial practice
