multimedia communications is at the core of the advanced interactive services that make up today's information society: videoconferencing, teleworking, teleshopping, and video on demand will benefit from developments in broadband and mobile telecommunication systems; intelligent multimedia terminals and digital signal processing. The latest research findings from these fields are presented here in the proceedings of the 10th tyrrhenian workshop on digital communications held in ischia, Italy, September 19-1998. Focus is placed on the following four areas: signal processing for multimedia communications; modeling, analysis, and simulation of multimedia traffic sources; access techniques; multimode multimedia terminals. In particular, multimedia services and applications are presented. This comprehensive collection of papers will enable the reader to keep pace with the rapid changes that are taking place in this field. Experts have co-operated with top research centers worldwide on an academic and industrial level to make this an up-to-date reference volume for all those who are concerned with technological advances in multimedia distributed systems.

This book constitutes the refereed proceedings of the 16th international symposium on automated technology for verification and analysis (ATVA 2018) held in Los Angeles, CA, USA, in October 2018. The 27 full papers presented together with 5 short papers and 3 invited talks were carefully reviewed and selected from 82 submissions. The symposium is dedicated to the promotion of research on theoretical and practical aspects of automated analysis, verification, and synthesis by providing a forum for interaction between the regional and the international research communities and industry in the field.

Since their inception, the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years, but they are now in print once again. Reverse Mathematics is a program of research in the foundations of mathematics motivated by two foundational questions: what are appropriate axioms for mathematics, and what are the logical strengths of particular axioms and particular theorems? This volume, the twenty-first publication in the Lecture Notes in Logic series, contains twenty-four original research papers from respected authors that present exciting new developments in reverse mathematics and subsystems of second-order arithmetic since 1998.

This two-volume set contains the proceedings of the June 1999 conference devoted to presenting and exploring scientific and technological advancements, innovations, opportunities, and solutions in multimedia applications. Among other topics, the 318 contributions cover quality of service, network management, and distributed multimedia systems; video compression; web and video servers; virtual and augmented reality; computer graphics and animation; multimodal interaction and usability; content-based retrieval from image and video databases; authoring tools; software engineering technologies for multimedia; electronic commerce and educational/cultural heritage and medical applications. It contains an author index but no subject index. Annotation c. Book News, Inc., Portland, OR; booknews.com.
