informality remains widespread in south asia despite decades of economic growth the low earnings and high vulnerability in the informal sector make this a major development issue for the region yet there is no consensus on its causes and consequences with the debate polarized between a view that informality is a problem of regulatory evasion and should be eradicated and another that equates informality with economic exclusion recent advances in analyzing informality as the outcome of firm dynamics in distorted economic environments can help reconcile them building on these advances the approach adopted in this volume clarifies that there are different types of informality with different drivers and consequences the report has four main messages that underscore the need for a multipronged strategy first informality in south asia is dominated by firms that happen to be outside the purview of regulations because they are small as opposed to those that remain small to escape regulations second reforms of business regulations tend to have small direct effects on the informal sector although they could have sizable indirect impacts on it if they succeed in removing major inefficiencies in the broader economy third e-commerce platforms offer new opportunities to informal firms and workers but many of them lack complementary skills or credit to benefit from such technologies fourth a combination of contributory and non contributory programs recognizing the heterogeneous saving capacities of informal workers may be necessary to achieve more universal coverage of social insurance
