a prismatic look at the meeting of marie curie and albert einstein and the impact these two pillars of science had on the world of physics which was in turmoil in 1911 some of the greatest minds in science convened at the first solvay conference in physics a meeting like no other almost half of the attendees had won or would go on to win the nobel prize over the course of those few days these minds began to realize that classical physics was about to give way to quantum theory a seismic shift in our history and how we understand not just our world but the universe at the center of this meeting were marie curie and a young albert einstein in the years preceding curie had faced the death of her husband and soul mate pierre she was on the cusp of being awarded her second nobel prize but scandal erupted all around her when the french press revealed that she was having an affair with a fellow scientist paul langevin the subject of vicious misogynist and xenophobic attacks in the french press curie found herself in a storm that threatened her scientific legacy albert einstein proved an supporter in her travails they had an instant connection at solvay he was young and already showing flourishes of his enormous genius curie had been responsible for one of the greatest discoveries in modern science radioactivity but still faced resistance and scorn einstein recognized this grave injustice and their mutual admiration and respect borne out of this their first meeting would go on to serve them in their paths forward to making history curie and einstein come alive as the complex people they were in the pages of the soul of genius utilizing never before seen correspondance and notes jeffrey orens reveals the human side of these brilliant scientists one who pushed boundaries and demanded equality in a man s world no matter the cost and the other who was destined to become synonymous with genius

some discoveries have shaken the world and left their mark in an important way newton s theory of gravity darwin s theory of evolution and einstein s theories of relativity come immediately to mind one thing they have in common is a bold and brave new idea when these new theories are eventually accepted they become pillars of science and more importantly foundations of society then occasionally a new idea comes along that rattles one of these pillars my new idea should do just that shake but not topple our theory of gravity hopefully it will bring gravity to the masses not just add more mass to gravity theory it solves newton s mystery and einstein s enigma supports most current gravity theory but adds a new dimension to physics and will become a major part of the new gravity pillar of physics
