this book stems from a unique and highly effective approach in introducing signal processing instrumentation diagnostics filtering control and system integration it presents the interactive industrial grade software testbed of mold oscillator that captures the mold motion distortion induced by coupling of the electro hydraulic actuator nonlinearity with the resonance of the mold oscillator beam assembly the testbed is then employed as a virtual lab to generate input output data records that permit unraveling and refining complex behavior of the actual production system through merging dynamics signal processing instrumentation and control into a coherent problem solving package the material is presented in a visually rich mathematically and graphically well supported but not analytically overburdened format by incorporating software testbed into homework and project assignments the book fully brings out the excitement of going through the adventure of exploring and solving a mold oscillator distortion problem while covering the key signal processing diagnostics instrumentation modeling control and system integration concepts the approach presented in this book has been supported by two education advancement awards from the college of engineering of the university of illinois at urbana champaign

research for educational change presents ways in which educational research can fulfil its commitments to educational practice focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident the question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice in the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a south african mathematics classroom in the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices this book will be key reading for postgraduates researchers and academics in education and particularly in the areas

of mathematics education education research teacher education and classroom practice it will also appeal to teacher educators practitioners and undergraduate students interested in educational research
