the interface between the urologist and other disciplines in medicine continues to increase as
the character of urology continues to change urologists have for example developed strong
links with microbiol ogists over mutual problems of infection in the urinary tract urolog ists
have been involved in the development of modern management of renal disease and
especially renal failure indeed even before the subject of nephrology had been defined
similarly the links between endocrinology and infertility and more recently links between
imaging and urology have led to the mutual benefit of these subjects and certainly to better
patient care the pharmacology of the urinary tract has proved to be a difficult area of study
slowly but progressively it has become evident that this is an area of great potential for
urologists our patients have a range of problems where non surgical management would be
ideal but finding the right drug for the right condition has remained an elusive task many of the
earlier trials showed an impressive placebo response rate and emphasised the need for well
planned controlled clinical trials the place of such trials in the evaluation of new treatments
for urinary symptoms is now unchallenged and uncon trolled data are of little value this book
represents a skillful combination of background infor mation and its clinical application the
review of the pharmacokine tics of the various groups of drugs provides a very useful
background to both the use of current drugs and also the prospects for the future
