on June 13–14, 2018, the National Academies of Sciences, Engineering, and Medicine convened a multistakeholder workshop to examine the transitions affecting global health and innovative global health solutions. The goal of bringing these two topics together was to collectively explore models for innovative partnerships and private sector engagement with the potential to support countries in transition. This publication summarizes the presentations and discussions from the workshop.

This groundbreaking book brings an important spatial perspective to our understanding of genocide through a fresh interpretation of Germany under Hitler, Cambodia under the Khmer Rouge, and China's Great Leap Forward famine under Mao. James A. Tyner's powerful analysis of these horrifying cases provides insight into the larger questions of sovereignty and state policies that determine who will live and who will die. Specifically, he explores the government practices that result in genocide and how they are informed by the calculation and valuation of life and death. A geographical perspective on genocide highlights that mass violence in the minds of perpetrators is viewed as an effective and legitimate strategy of state building. These three histories of mass violence demonstrate how specific states articulate and act upon particular geographical concepts that determine and devalue the moral worth of groups and individuals. Clearly and compellingly written, this book will bring fresh and valuable insights into state genocidal behavior.

Many translation solutions, often called procedures, techniques, or strategies, have been proposed over the past 50 years or so in French, Chinese, Russian, Ukrainian, English, Spanish, German, Japanese, Italian, Czech, and Slovak. This book analyzes, criticizes, and compares them, proposing a new list of solutions that can be used in training translators to work between many languages. The book also traces out an entirely new history of contemporary translation studies, showing, for example, how the Russian tradition was adapted in China, how the impact of transformational linguistics was resisted, and

how scholarship has developed an intercultural metalanguage over and above the concerns of specific national languages the book reveals the intensely political nature of translation theory even in its most apparently technical aspects the lists were used to advance the agendas of not just linguistic nationalisms but also state regimes this is a history in which hitler stalin and mao all played roles communist propaganda and imperialist evangelism were both legitimized ukrainian advances in translation theory were forcefully silenced in the 1930s the cold war both stimulated the application of transformational grammar and blocked news of russian translation theory french translation theory was conscripted into the agenda of japanese exceptionalism and much else

in this mystery from an edgar award winning author sleuth peter duluth is caught in a succession of double takes and double crosses kirkus reviews patrick quentin best known for the peter duluth puzzle mysteries also penned outstanding detective novels from the 1930s through the 1960s under other pseudonyms including q patrick and jonathan stagge anthony boucher wrote quentin is particularly noted for the enviable polish and grace which make him one of the leading american fabricants of the murderous comedy of manners but this surface smoothness conceals intricate and meticulous plot construction as faultless as that of agatha christie with his marriage to his wife on the rebound but still precarious peter duluth knows the last thing he needs now is more trouble with iris away making a movie maybe he can finally get back to writing his next broadway hit unfortunately after the sultry deborah brand slinks into his car asking for a ride things are about to get far more complicated and dangerous because when his passenger ends up dead peter becomes ensnared in a conspiracy that will take him from the jungles of mexico to the back alleys of new orleans and if peter isn t careful it may take him straight to the grave

in the fast changing culture of antebellum new york writers of every stripe celebrated the city as a stage for the daily urban encounter between the familiar and the inexplicable probing into these richly varied texts hans bergmann uncovers the innovations in writing that accompanied the new market society the penny newspapers grandiose boastings the poetic catalogues of walt whitman the sentimental realism of charity workers the sensationalism of slum visitors and the complex urban encounters of herman melville s fiction the period in which new york the city itself became firmly

established as a subject invented a literary form that attempts to capture the variety of the teeming city and the flaneur the walking observer but Bergmann does not simply lead a parade of images and themes he explores the ways in which these observers understood what was happening around them and to them always attentive to class struggle and race and gender issues God in the Street shows how the penny press and Whitman's New York poetry create a new mass culture hero who interprets and dignifies the city's confusions New York writers both serious and sensationalist meditate upon street encounters with tricksters and confidence men and explore the meanings of encounters Melville's *Bartleby the Scrivener* underlines the unrelenting isolation and inability to control the interpreter Bergmann reinterprets Melville's *The Confidence-Man* as an example of how a complex literary form arises directly from its own historical materials and is itself socially symbolic Bergmann sees Melville as special because he recognizes his inability to make sense of the surface of chaotic images and encounters in mid-century New York City Melville believes God is in the street unavailable and unrecognizable rather than omnipresent and guiding author note Hans Bergmann is professor of English and Cultural Studies at George Mason University

a lively intellectual history that explores how prominent mid-century public intellectuals approached Zionism and then the state of Israel itself and its conflicts with the Arab world in this lively intellectual history of the political left cultural critic Susie Linfield investigates how eight prominent twentieth-century intellectuals struggled with the philosophy of Zionism and then with Israel and its conflicts with the Arab world constructed as a series of interrelated portraits that combine the personal and the political the book includes philosophers historians journalists and activists such as Hannah Arendt Arthur Koestler I. F. Stone and Noam Chomsky in their engagement with Zionism these influential thinkers also wrestled with the twentieth century's most crucial political dilemmas socialism nationalism democracy colonialism terrorism and anti-Semitism in other words in probing Zionism they confronted the very nature of modernity and the often catastrophic histories of our time by examining these leftist intellectuals Linfield also seeks to understand how the contemporary left has become focused on anti-Zionism and how Israel itself has moved rightward

nothing tends so much to the advancement of knowledge as the application of a new instrument sir humphry davy 1778 1829 neuroscience has become a rapidly expanding endeavor that relies on a number of other sciences such as mathematics physics chemistry engineering computer sci ence general biology and medicine genetics etc in fact many of its recent success es result from the application of ideas and methods borrowed from these fields insofar it is a true interdisciplinary undertaking this convergence of influences accounts for part of its enormous attractiveness and fascination to students and re searchers from diverse walks of life or science for that matter it is probably fair to say that a great number of neuroscience s most creative and productive proponents have been lured into this field not only by the excitement about the possibility to un mask the secrets of the human mind but also by the appeal of a vast unknown land needing cultivation and tools to cultivate it danger may arise for any science if it is dominated by methods and techniques of investigation rather than by problems to be solved and concepts to be developed this might concentrate efforts onto the technically feasible and doable rather than on the real issues but on the other hand especially the young and growing sciences are heavily dependent on the development and application of methods often even before a problem relying on these methods may become apparent

specialist periodical reports provide systematic and detailed review coverage of progress in the major areas of chemical

research written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry for over 80 years the royal society of chemistry and its predecessor the chemical society have been publishing reports charting developments in chemistry which originally took the form of annual reports however by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series specialist periodical reports was born the annual reports themselves still existed but were divided into two and subsequently three volumes covering inorganic organic and physical chemistry for more general coverage of the highlights in chemistry they remain a must since that time the spr series has altered according to the fluctuating degree of activity in various fields of chemistry some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

this handbook examines the interplay between metamemory and memory each contributor discusses cutting edge theory and research that in some way showcases the symbiotic relationship between metamemory and memory together these chapters support a central thesis which is that a complete understanding of either metamemory or memory is not possible without understanding their mutual influence the inspiration for this volume was the life and research of thomas o nelson whose pioneering and influential research in the fields of metamemory and memory consistently highlighted their integrated nature

there is a growing theoretical and practical interest in the topic of metacognition how we monitor and control our mental processes applied metacognition provides a coherent and up to date overview of the relation between theories in metacognition and their application in real world situations as well as a theoretical overview there are substantive chapters covering metacognition in three areas of application metacognition in education metacognition in everyday life memory and metacognition in different populations the book has contributions from many of the leading researchers in

metacognition from around the world

the 21st century will see monumental change either the human race will use its knowledge and skills and change the way it interacts with the environment or the environment will change the way it interacts with its inhabitants in the first case the focus of this book we would see our sophisticated understanding in areas such as physics chemistry engineering biology planning commerce business and governance accumulated over the last 1 000 years brought to bear on the challenge of dramatically reducing our pressure on the environment the second case however is the opposite scenario involving the decline of the planet s ecosystems until they reach thresholds where recovery is not possible and following which we have no idea what happens for instance if we fail to respond to sir nicolas stern s call to meet appropriate stabilisation trajectories for greenhouse gas emissions and we allow the average temperature of our planets surface to increase by 4 6 degrees celsius we will see staggering changes to our environment including rapidly rising sea level withering crops diminishing water reserves drought cyclones floods allowing this to happen will be the failure of our species and those that survive will have a deadly legacy in this update to the 1997 international best seller factor four ernst von weizsäcker again leads a team to present a compelling case for sector wide advances that can deliver significant resource productivity improvements over the coming century the purpose of this book is to inspire hope and to then inform meaningful action in the coming decades to respond to the greatest challenge our species has ever faced 6 that of living in harmony with our planet and its other inhabitants publisher s description
