Hayes principles and methods of toxicology has long been established as a reliable reference to the concepts, methodologies, and assessments integral to toxicology. The new sixth edition has been revised and updated while maintaining the same high standards that have made this volume a benchmark resource in the field. With new authors and new chapters that address the advances and developments since the fifth edition, the book presents everything toxicologists and students need to know to understand hazards and mechanisms of toxicity, enabling them to better assess risk. The book begins with the four basic principles of toxicology: dose matters, people differ, everything transforms, and timing is crucial. The contributors discuss various agents of toxicity, including foodborne solvents, crop protection chemicals, radiation, and plant and animal toxins. They examine various methods for defining and measuring toxicity in a host of areas, including genetics, carcinogenicity, toxicity in major body systems, and the environment. This new edition contains an expanded glossary reflecting significant changes in the field. New topics in this edition include the importance of dose response, systems toxicology, food safety, the humane use and care of animals, neurotoxicology. The comprehensive coverage and clear writing style make this volume an invaluable text for students and a one-stop reference for professionals.

Tudor O. Bompa, the pioneer of periodization training, and Carlo A. Buzzichelli, one of the world's foremost experts on training methods, use scientific support and their expertise to teach you how to maximize training gains with periodization.
