originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions the level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics at this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives the solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

this second edition introduces an additional set of new mathematical problems with their detailed solutions in real analysis it also provides numerous improved solutions to the existing problems from the previous edition and includes very useful tips and skills for the readers to master successfully there are three more chapters that expand further on the topics of bernoulli numbers differential equations and metric spaces each chapter has a summary of basic points in which some fundamental definitions and results are prepared this also contains many brief historical comments for some significant mathematical results in real analysis together with many references problems and solutions in real analysis can be treated as a collection of advanced exercises by undergraduate students during or after their courses of calculus and linear algebra it is also instructive for graduate students who are interested in analytic number theory readers will also be able to completely grasp a simple and elementary proof of the prime number theorem through several exercises this volume is also suitable for
