the exchange between physics and metrology is always fascinating and exciting many are the open problems in physics that call for extremely precise standards many are the advances in metrology made possible by a deep and assiduous study of the underlying physics one has just to think of the enormous sophistication required in the measurements of some absolute quantities such as the avogadro the gas or the gravitational constants it is also worth noticing that not only the units of a metrological system are interrelated through the fundamental constants but also the latter find their full significance when they are determined through the most exacting metrological experiments over the past decade many improvements took place and these are discussed in this book from one side the old caesium si second definition has found a new realisation with the fountain approach replacing the classical thermal atomic beam the use of cold atom techniques in which bunches of inert atoms are collected slowed down and cooled has opened a number of new and unexpected avenues for metrology and fundamental constants one of these possibilities being the atom interferometry another important quantum jump was the demonstration of the possibility of performing a direct frequency division in the visible using ultra short femtosecond pulses in addition the possibility of counting electrons or photons gave a fundamental support to the development of single electron capacitance standards and to new scenarios in the absolute calibration of photo detectors

norms in the contemporary world system are no longer established exclusively through inter state agreement

but increasingly are becoming truly global this is made possible by the rapid privatisation of law and the self regulation of the transnational private sector other forces driving this epochal transformation are the overwhelming pre eminence of the united states the erosion of the role of the united nations and the appearance of new actors such as subnational entities and ngo s they all contribute to the creation and ideological justification of new norms this collection brings together critical studies on this complex process written by authors from eleven different countries both established scholars and young specialists the book challenges the often convenient rationalisations of regime theory the governance approach and post national or cosmopolitan democracy in order to explore the practical theoretical and ethical implications of the new world of global norms
