in 2015 laura rumbley put forward the notion that higher education in a highly complex globally interdependent world would be wise to commit to an agenda of intelligent internationalization i2 i2 turns on the notion that the development of a thoughtful alliance between the research practitioner and policy communities in tandem with key decision makers in leadership roles is essential for institutions and systems of higher education seeking sustained relevance and vitality through their internationalization efforts does intelligent internationalization make sense what is faulty misguided or missing from this analysis that could be strengthened through further consideration on the other hand what speaks to its value as an idea or agenda to advance the way that internationalization is understood and enacted in the world these issues will be addressed in this book which builds on a 2018 symposium on intelligent internationalization

digital libraries dls have evolved since their launch in 1991 into an important type of information system with widespread application this volume advances that trend further by describing new research and development in the dl field that builds upon the 5s societies scenarios spaces structures streams framework which is discussed in three other dl volumes in this series while the 5s framework may be used to describe many types of information systems and is likely to have even broader utility and appeal we focus here on digital libraries drawing upon six akbar kozievitch leidig li murthy park completed and two chen fohu in process dissertations as well as the efforts of collaborating researchers and scores of related publications presentations tutorials and reports this book demonstrates the applicability of 5s in five digital library application areas that also have importance in the context of the www 2 0 and innovative information systems by integrating surveys of the state of the art newresearch connections with formalization case studies and exercises projects this book can serve as a textbook for those interested in computing information and or library science chapter 1 focuses on images explaining how they connect with information retrieval in the context of cbir systems chapter 2 gives two case studies of dls used in education which is one of the most common applications of digital

libraries chapter 3 covers social networks which are at the heart of work on 20 explaining the construction and use of deduced graphs that can enhance retrieval and recommendation chapter 4 demonstrates the value of dls in escience focusing in particular on cyber infrastructure for simulation chapter 5 surveys geospatial information in dls with a case study on geocoding given this rich content we trust that any interested in digital libraries or in related systems will find this volume to be motivating intellectually satisfying and useful we hope it will help move digital libraries forward into a science as well as a practice we hope it will help build community that will address the needs of the next generation of dls table of contents content based image retrieval education social networks in digital libraries escience and simulation digital libraries geospatial information bibliography

unstructured text as one of the most important data forms plays a crucial role in data driven decision making in domains ranging from social networking and information retrieval to scientific research and healthcare informatics in many emerging applications people's information need from text data is becoming multidimensional they demand useful insights along multiple aspects from a text corpus however acquiring such multidimensional knowledge from massive text data remains a challenging task this book presents data mining techniques that turn unstructured text data into multidimensional knowledge we investigate two core questions 1 how does one identify task relevant text data with declarative queries in multiple dimensions 2 how does one distill knowledge from text data in a multidimensional space to address the above questions we develop a text cube framework first we develop a cube construction module that organizes unstructured data into a cube structure by discovering latent multidimensional and multi granular structure from the unstructured text corpus and allocating documents into the structure second we develop a cube exploitation module that models multiple dimensions in the cube space thereby distilling from user selected data multidimensional knowledge together these two modules constitute an integrated pipeline leveraging the cube structure users can perform multidimensional multigranular data selection with declarative queries and with cube exploitation algorithms users can extract multidimensional patterns from the selected data for decision making the proposed framework has two distinctive advantages when turning text data into multidimensional knowledge flexibility and label efficiency first it enables acquiring multidimensional knowledge flexibly as the cube structure allows users to easily identify task relevant data along multiple dimensions at varied granularities and further distill

multidimensional knowledge second the algorithms for cube construction and exploitation require little supervision this makes the framework appealing for many applications where labeled data are expensive to obtain
