in this book the major and at the same time most difficult questions of comparative cognition research here called the sextet of animal intelligence are presented using good examples discussed in all their facets and finally answered with due caution starting with the question of human rationality which is illuminated historically at the beginning and presented as a framework concept the latest research is dealt with which either revises preferred interpretation schemes or calls for new ones it is particularly

important to critically question hastily conceived categorisations often derived from research on the human species and from everyday psychological notions and to consider so called animal irrationality as a mis performance from the perspective of species specific natural requirements why is it at all important to know whether animals can act rationally intentionally or consciously the answer is because it is of both theoretical and practical relevance theoretical relevance is twofold because it is good in itself to understand animals better but this knowledge is then also of great importance for assessing ourselves this brings up the practical relevance we are not only surrounded by animals we live with animals we live from animals yet we see ourselves as separate from them in important ways consciousness language and rationality are essential characteristics with which we justify our human uniqueness and thus our superiority and ultimately our right to dominate and use animals in many ways if an animal can feel pain we feel obliged to avoid inflicting unnecessary pain on it but yet we do not accord it the special inherent value and dignity associated with consciousness and rationality this has far reaching consequences for human action and the coexistence of humans and animals

research on human judgment and decision making has been strongly guided by a normative descriptive approach according to which human decision making is compared to the normative models provided by decision theory statistics and the probability calculus a common empirical finding has been that human behavior deviates from the prescriptions by normative models that judgments and decisions are subject to cognitive biases it is interesting to note that swedish research on judgment and decision making made an early departure from this dominating mainstream tradition albeit in two different ways the neo brunswikian research highlights the relationship between the laboratory task and the adaptation to a natural environment the process tracing approach attempts to identify the cognitive processes before during and after a decision this volume summarizes current swedish research on judgment and decision making covering topics such as dynamic decision making confidence research the search for dominance structures and differentiation and social decision making

for the practicing neuropsychologist or researcher keeping up with the sheer number of newly published or updated tests is a challenge as is evaluating the utility and psychometric properties of neuropsychological tests in a clinical context the goal of the third edition of a compendium of neuropsychological tests a well established neuropsychology reference text is twofold first the compendium is intended to serve as a guidebook that provides a comprehensive overview of the essential aspects of neuropsychological assessment practice second it is intended as a comprehensive sourcebook of critical reviews of major neuropsychological assessment tools for the use by practicing clinicians and researchers written in a comprehensive easy to read reference format and based on exhaustive review of research literature in neuropsychology neurology psychology and related disciplines the book covers topics such as basic aspects of neuropsychological assessment as well as the theoretical background norms and the utility reliability and validity of neuropsychological tests for this third edition all chapters have been extensively revised and updated the text has been considerably expanded to provide a comprehensive yet practical overview of the state of the field two new chapters have been added psychometrics in neuropsychological assessment and norms in psychological assessment the first

two chapters present basic psychometric concepts and principles chapters three and four consider practical aspects of the history taking interview and the assessment process itself chapter five provides guidelines on report writing and chapters six through sixteen consist of detailed critical reviews of neuropsychological tests and address the topics of intelligence achievement executive function attention memory language visual perception somatosensory olfactory function mood personality and response bias a unique feature is the inclusion of tables that summarize salient features of tests within each domain so that readers can easily compare measures additional tables within each test review summarize important features of each test highlight aspects of each normative dataset and provide an overview of psychometric properties of interest to neuropsychologists neurologists psychiatrists and educational and clinical psychologists working with adults as well as pediatric populations this volume will aid practitioners in selecting appropriate testing measures for their patients and will provide them with the knowledge needed to make empirically supported interpretations of test results
