as teachers we often tend to expect other countries to teach chemistry in much the same way as we do but educational systems differ widely at bielefeld university we started a project to analyse the approach to chemical education in different countries from all over the world teaching chemistry around the world 25 countries have participated in the project the resulting country studies are presented in this book this book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries especially in the case of the school subject chemistry which is very unpopular on the one hand and occupies an exceptional position on the other hand due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving we have to learn from each others educational systems

this book discusses how the dutch vocational education system has undergone significant waves of reform driven by global imperatives national concerns and governmental policy goals like elsewhere the impetuses for these reforms are directed to generating a more industry responsive locally accountable and competence based vocational education system each wave of reforms however has had particular emphases and directed to achieve particular policy outcomes yet they are more than mere versions of what had or is occurring elsewhere they are shaped by specific national imperatives sentiments and localised concerns consequently whilst this book elaborate what constitutes the contemporary provision of vocational education in the netherlands also addresses a broader concern of how vocational education systems become formed manifested within nation states and then are transformed through particular imperatives institutional arrangement and localised factors so the readers of this book whilst learning much about the dutch vocational education system will also come to identify and engage with a selection of contributions that inform factors that situate shape and transform vocational education systems such a focus seems important given an era when there are concerns to standardise and make uniform educational provisions often for administrative or political imperatives as such this book will be of

as globalization and the flow of labor across the world accelerated during the latter part of the 20th century the presence of foreign born workers in a country s labor market became one of the most prominent and controversial features of modern economies countries that facilitated the arrival of foreign born individuals often benefited from the increase in labor supply an important channel for the benefits is through lower prices for consumer goods and services in the host country this is not surprising because immigration is just another form of international trade which often leads to cost savings and more diversity in the market the immigrants themselves have also gained from international migration as it provides an opportunity to improve one s standard of living pass remittances to family in the country of origin and find new opportunities for general human flourishing in newly adopted surroundings despite the myriad benefits that can result from the free movement of labor around the world there is still deep concern and political debate about immigration s aftermath the main economic concern apart from social concerns such as social cohesion centers on whether international migrants adversely impact labor market opportunities of natives the labor market prospects for foreign born individuals both in an absolute sense and in comparison to natives are also very different across continents as well as between countries that are in close proximity to one another this variation could be driven by differences in the flexibility and structure of the host country s labor market or differences in the characteristics of the immigrants themselves examining the relative importance of these and other possible factors is another main theme in the study of immigration and the labor market it is also addressed in the research presented in this handbook

the quality of education is a term that is frequently used in public debates understood in the sense of education being generally okay or rather most frequently as not okay perhaps there is an overruling nostalgic view that formerly education was better than today in scholarly discourse there are those who maintain that the quality of education is an illusive term with varying interpretations in different settings and by different stakeholders in this book the complexity of the concept of education quality is recognized but a conceptual framework is presented that

makes quality despite its complexity amenable to rational and empirical analysis productivity equity effectiveness efficiency and responsiveness of education systems are seen as key facets of quality a concrete set of indicators is presented that makes for the measurement of these quality facets in the second part of the book the quality framework is applied to an analysis of the quality of education in the netherlands common sense in the netherlands is dominated by the view that the quality of education is a cause for serious concern some recent quality reviews take the same pessimistic outlook however the current overview of indicators on the dutch system seen from an international perspective presents a picture that is much more positive still there is always room for improvement in the case of the netherlands this should probably be sought in diminishing the selectivity of the system as a way to improve participation in higher education
