this book is about machine translation mt and the classic problems associated with this language technology it examines the causes of these problems and for linguistic rule based systems attributes the cause to language s ambiguity and complexity and their interplay in logic driven processes for non linguistic data driven systems the book attributes translation shortcomings to the very lack of linguistics it then proposes a demonstrable way to relieve these drawbacks in the shape of a working translation model logos model that has taken its inspiration from key assumptions about psycholinguistic and neurolinguistic function the book suggests that this brain based mechanism is effective precisely because it bridges both linguistically driven and data driven methodologies it shows how simulation of this cerebral mechanism has freed this one mt model from the all important classic problem of complexity when coping with the ambiguities of language logos model accomplishes this by a data driven process that does not sacrifice linguistic knowledge but that like the brain integrates linguistics within a data driven process as a consequence the book suggests that the brain like mechanism embedded in this model has the potential to contribute to further advances in machine translation in all its technological instantiations
