algorithmic principles of mathematical programming investigates the mathematical structures and principles underlying the design of efficient algorithms for optimization problems recent advances in algorithmic theory have shown that the traditionally separate areas of discrete optimization linear programming and nonlinear optimization are closely linked this book offers a comprehensive introduction to the whole subject and leads the reader to the frontiers of current research the prerequisites to use the book are very elementary all the tools from numerical linear algebra and calculus are fully reviewed and developed rather than attempting to be encyclopedic the book illustrates the important basic techniques with typical problems the focus is on efficient algorithms with respect to practical usefulness algorithmic complexity theory is presented with the goal of helping the reader understand the concepts without having to become a theoretical specialist further theory is outlined and supplemented with pointers to the relevant literature

wsc2008chair s welcome message dear colleague the world soft computing wsc conference is an annual international online conference on applied and theoretical soft computing technology this wsc 2008 is the thirteenth conference in this series and it has been a great success we received a lot of excellent paper submissions which were peer reviewed by an international team of experts only 60 papers out of 111 submissions were selected for online publication this assured a high quality standard for this online conference the corresponding online statistics are a proof of the great world wide interest in the wsc 2008 conference the conference website had a total of 33 367 different human user accesses from 43 countries with around 100 visitors every day 151 people signed up to wsc to discuss their scientific disciplines in our chat rooms and the forum also audio and slide presentations allowed a detailed discussion of the papers the submissions and discussions showed that there is a wide range of soft computing applications to date the topics covered by the conference range from applied to theoretical aspects of fuzzy neuro fuzzy and rough sets over to neural networks to single and multi objective optimisation contributions about particleswarm optimisation gene expression programming clustering classification support vector machines quantum evolution and agent systems have also been received one whole session was devoted to soft computing techniques in computer graphics imaging vision and signal processing

provides an introduction to modern object oriented design principles and applications for the fast growing area of modeling and simulation covers the topic of multi domain system modeling and design with applications that have components from several areas serves as a reference for the modelica language as well as a comprehensive overview of application model libraries for a number of application domains

this book is about it architecture set against the background of the practical insights gained at hp hewlett packard since 1986 and formalized in the hp methodology for it strategy and architecture itsa the important message is that architecture is used to solve problems or exploit opportunities and is not used for the sake of architecture core to this is the concept of a seamless chain of justification that unites stakeholders in defining reinforcing and supporting the single best fitting it business solution this book teaches the it architecture practitioner how to align the different views and interests of these stakeholders into coherent it architecture artifacts by permeating the business functional technical and implementation perspectives

this book was first published in 1983

already the market leader in the field modelling transport has become still more indispensable following a thorough and detailed update enhancements include two entirely new chapters on modelling for private sector projects and on activity based modelling a new section on dynamic assignment and micro simulation and sizeable updates to sections on disaggregate modelling and stated preference design and analysis it also tackles topical issues such as valuation of externalities and the role of gps in travel time surveys providing unrivalled depth and breadth of coverage each topic is approached as a modelling exercise with discussion of the roles of theory data model specification estimation validation and application the authors present the state of the art and its practical application in a pedagogic manner easily understandable to both students and practitioners follows on from the highly successful third edition universally acknowledged as the leading text on transport modelling techniques and applications includes two new chapters on modelling for private sector projects and activity based modeling and numerous updates to existing chapters

incorporates treatment of recent issues and concerns like risk analysis and the dynamic interaction between land use and transport provides comprehensive and rigorous information and guidance enabling readers to make practical use of every available technique relates the topics to new external factors and technologies such as global warming valuation of externalities and global positioning systems gps
