in the past 20 years protein engineering has been used for the production of proteins mostly for biological applications the incorporation of artificial amino acids and chemical handles into proteins had made possible the design and production of protein based materials like hybrid inorganic organic materials smart responsive materials monodisperse polymers and nanoscale assemblies in the current topic we cover current uses and envision future applications of materials generated using protein engineering and biosynthesis techniques i would like to acknowledge the u s office of naval research for financial support and dr cherise bernard for her contributions during the early stages of the research topic

despite the importance of engineering and technology in economic social and other aspects of our lives what it means to develop as an engineer and how this is to occur is not widely discussed becoming a human engineer explores the moral and ethical challenges of educating engineers through the philosophical lens of personalism a branch of philosophy that puts the person first seeing human growth and development as central to good building from the philosophy

of the 20th century philosopher john macmurray this book explores how ethics and education intersect through a continuous cycle of action and reflection by pulling together disparate and wide ranging topics across engineering education several promising areas of future work are identified engineering methods and ways of reflection are deeply embedded in engineering education to the extent that they may interfere with becoming a person a focus on specific knowledges must complement rather than distract from developing the habits of mind necessary for engineers to adapt to a changing world providing meaningful experiences and explicitly focusing on developing multiple ways to reflect on these experiences are shown to be critical for the holistic development of engineers as persons
