the questions raised by a study of class and inequality are important but often complex this book succeeds in making them understandable without oversimplifying and its breadth originality and easy style will appeal to a wide readership peter saunders covers theories of social class as well as evidence on class inequalities in the contemporary period he analyses why class inequalities exist whether they are inevitable whether they are unjust and how they are changing the analysis is comprehensive and up to date and includes information on how the distribution of wealth and income and social mobility

chances have been changing during the thatcher years it also explores how the class structure is being affected by developments such as the spread of privatization and individual shareholdings the rise of the yuppies and the emergence of an underclass on the theoretical side professor saunders gives equal weight to marxist social democratic and neo liberal perspectives on class and inequality and writers as diverse as karl marx john rawls and friedrich hayek all receive serious and balanced consideration

the book offers an in depth analysis of several important theories of social class and stratification both past and present this critique is underpinned by a single coherent analytic framework organised around the notion of ownership this original approach allows the book to offer alternative treatments of the issues dealt with by the thinkers discussed here the central argument here is that there are only two classical theories of social class namely those developed by marx and weber and this clear systematisation of the main attributes of approaches to class and stratification makes it possible to see that many theories traditionally considered as class ones refer in fact to social stratification

hamburg university of applied sciences course kultur und sozialwissenschaften language english abstract social stratification implies that in every society goods and services are not equally distributed some people are wealthy enough to buy a house others have to pay rent to live in a small apartment more generally spoken why are some people rich and others poor a society

without social stratification implies that there are no inferior or superior positions and all human beings are equal and have the same prerequisites when they are born the opposite is the case people are born into families of unequal positions some are born into rich influential families others have to live under the poverty level wouldn't it be fair for all human beings to have the same starting position when they are born in every country the reality looks different and that is a reason why social stratification is such an interesting topic to what extent have inequality and difference an impact on people's life japan and the usa are both highly modernized and industrialized countries according to world bank the usa has the biggest gross national product gnp in the world followed by japan this fact underlines the importance of both nations for the world economy these figures get more interesting when they are put into relation with the population of each country the figure gnp per person is a measurement for the wealth of a country in this ranking the usa is in fourth place followed by japan albrecht et al 2003 these figures might give the impression that both countries are quite similar but there is one major difference japan is the only non western country that is industrialized the cultural background is different and that is a reason why a comparison between these countries can be interesting and might lead to surprising results in this paper i will try to find out what inequality is based on and why these differences occur of varying strength in both countries in these countries social stratification depends on cultural aspects as well as economical aspects the cultural background influences the way the society deals with economy after giving an introduction about basic definitions and concepts of social stratification i will describe and analyse differences in income and education in both societies to make a comparison useful and clear i will include data from the fischer weltalmanach and the human development report 2002 to this term paper

this volume presents a systematic discussion of the leading theoretical approaches to social stratification it is both an accessible overview and a distinctive contribution to the analysis of class status and power john scott argues that max weber's conceptual framework reconstructed and enlarged provides the basis for integrating what have been considered up to now as divergent approaches to stratification studies marxist theories of class and economic division normative functionalist theories of status

and cultural division and elitist theories of command and authoritarian division all find their place in the proposed framework each theoretical approach is illustrated through empirical investigations undertaken by writers associated with them recent work by dahrendorf wright and goldthorpe is also examined and it is shown how their arguments contribute to a theoretical synthesis in the analysis of stratification stratification and power will be much appreciated by students and academics alike in the social sciences the clarity of its style and the significance of its contribution have made it a leading text in its field

this classic volume by a well known linguist constitutes a systematic introduction to sociolinguistics unmatched in the clarity and forcefulness of its approach and to the study of language in its social setting
