the workshop on emerging services technology wewst06 took place in conjunction with the 4th european conference on services ecows 06 on 4th december 2006 in zurich switzerland acting as the natural extension to the main ecows conference the main goal of the wewst workshop is serving as a forum for providing early exposure and much needed feedback to grow and establish original and emerging ideas within the services community the wide variety of tools novel techniques and

emerging technological solutions presented in new ways share one common feature they advance the current services research in new directions by introducing new and sometimes controversial ideas into the field new focuses on research contributions advancing the state of the art in services technologies in the following areas model driven engineering for soa mobility and services streaming services and event driven architectures dynamic service discovery and composition lightweight orchestration gins sla creation and service delivery semantic managing change and service evolution business driven development service oriented grid computing middleware business process management for services software and service engineering new covers the whole spectrum which makes it a very important part of ecows

service foundations for the internet of services today's internet is standing at a crossroads the internet has evolved from a source of information to a critical infrastructure which underpins our lives and economies the demand for more multimedia content more interconnected devices more users a richer user experience services available any time and anywhere increases the pressure on existing networks and service platforms the internet needs a fundamental rearrangement to be ready to meet future needs one of the areas of research for the future internet is the internet of services a vision of the internet where everything e.g. information software platforms and infrastructures is available as a service services available on the internet of services can be used by anyone if they are used according to the policies defined by the provider and they can be extended with new services by anyone advantages of the internet of services include the possibility to build upon other people's efforts and the little investment needed upfront to develop an application the risk involved in pursuing new business ideas is diminished and might lead to more innovative ideas being tried out in practice it will lead to the appearance of new companies that are able to operate in niche areas providing services to other companies that will be able to focus on their core business

user centric networks ucn and information centric networks icn are new communication paradigms to increase the efficiency of content delivery and also content availability in this new concept the network infrastructure actively contributes to content caching and distribution this book presents the basic concepts of ucn and icn describes the main architecture proposals for these networks and discusses the main challenges to their development the book also looks at the current challenges for this concept including naming routing and caching on the network core elements several aspects of content security user privacy and practical issues in implementing ucn and icn

semantic technologies are experiencing an increasing popularity in the context of different domains and applications the understanding of any class of system can be significantly changed under the assumption any system is part of a global ecosystem known as semantic the semantic would be an evolving extension of current model normally referred as syntactic that introduces a semantic layer in which semantics or meaning of information are formally defined so semantics should integrate web centric standard information infrastructures improving several aspects of interaction among heterogeneous systems this is because common interoperability models are progressively becoming obsolete if compared with the intrinsic complexity and always more distributed focus that feature modern systems for example the basic interoperability model that assumes the interchange of messages among systems without any interpretation is simple but effective only in the context of

close environments also more advanced models such as the functional interoperability model that integrates basic interoperability model with the ability of interpreting data context under the assumption of a shared schema for data fields accessing appears not able to provide a full sustainable technologic support for open systems the semantic interoperability model would improve common interoperability models introducing the interpretation of means of data semantic interoperability is a concretely applicable interaction model under the assumption of adopting rich data models commonly called ontology composed of concepts within a domain and the relationships among those concepts in practice semantic technologies are partially inverting the common view at actor intelligence intelligence is not implemented only by actors but it is implicitly resident in the knowledge model in other words schemas contain information and the code to interpretate it

edugorilla publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources specializing in competitive exams and academic support edugorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels

the book is intended to provide readers with a comprehensive reference for the most current developments in the field it offers broad coverage of important topics with eighteen chapters covering both technology and applications written by international experts

over the last decade a great amount of effort and resources have been invested in the development of semantic service sws frameworks numerous description languages frameworks tools and matchmaking and composition algorithms have been proposed nevertheless when faced with a real world problem it is still very hard to decide which of these different approaches to use in this book the editors present an overall overview and comparison of the main current evaluation initiatives for sws the presentation is divided into four parts each referring to one of the evaluation initiatives part i covers the long established first two tracks of the semantic service selection s3 contest the owl s matchmaker evaluation and the sawsdl matchmaker evaluation part ii introduces the new s3 jena geography dataset jgd cross evaluation contest part iii presents the semantic service challenge lastly part iv reports on the semantic aspects of the service challenge the introduction to each part provides an overview of the evaluation initiative and overall results for its latest evaluation workshops the following chapters in each part written by the participants detail their approaches solutions and lessons learned this book is aimed at two different types of readers researchers on sws technology receive an overview of existing approaches in sws with a particular focus on evaluation approaches potential users of sws technologies receive a comprehensive summary of the respective strengths and weaknesses of current systems and thus guidance on factors that play a role in evaluation

this book brings together researchers scientists and representatives from different communities to study understand and explore the theory tools and applications of the semantic it joins the semantic ontologies knowledge management services and processes into one fully comprehensive resource serving as the platform for exchange of both practical technologies and research provided by publisher

this book includes the proceedings of the international conference on advanced information technology services and systems ait2s 17 held on april 14 15 2017 in tangier morocco presenting the latest research in the field it stimulates debate discusses new challenges and provides insights into the field in order to promote closer interaction and interdisciplinary collaboration between researchers and practitioners intended for researchers and practitioners in advanced information technology management and networking the book is also of interest to those in emergent fields such as data science and analytics big data internet of things smart networked systems artificial intelligence and expert systems pattern recognition and cloud computing

in the mid 1990s tim berners lee had the idea of developing the world wide into a semantic web of information that could be interpreted by machines in order to allow the automatic exploitation of data which until then had to be done by humans manually one of the first people to research topics related to the semantic was professor rudi studer from the beginning rudi drove projects like ontobroker and on to knowledge which later resulted in w3c standards such as rdf and owl by the late 1990s rudi had established a research group at the university of karlsruhe which later became the nucleus and breeding ground for semantic research and many of today s well known research groups were either founded by his disciples or benefited from close cooperation with this think tank in this book published in celebration of rudi s 60th birthday many of his colleagues look back on the main research results achieved during the last 20 years under the editorship of dieter fensel once one of rudi s early phd students an impressive list of contributors and contributions has been collected covering areas like knowledge management ontology engineering service management and semantic search overall this book provides an excellent overview of the state of the art in semantic research by combining historical roots with the latest results which may finally make the dream of a knowledge software and services come true

this book constitutes the revised selected papers of the 12th international conference on service oriented computing icsoc 2014 held in paris france in november 2014 the conference hosted the following seven workshops 10th international workshop in engineering service oriented applications weso 2014 first workshop on resource management in service oriented computing rmsoc 2014 first international workshop on knowledge aware service oriented applications performance assessment and auditing in service computing kasa 2014 workshop on intelligent service clouds isc 2014 third international workshop on self managing pervasive service systems semaps 2014 first international workshop on formal modeling and verification of service based systems for moves 2014 4th international workshop on cloud computing and scientific applications ccsa 2014 the papers included in this volume were carefully reviewed and selected from numerous submissions they address various topics in the service oriented computing domain and its emerging applications

service oriented computing is one of the most promising software engineering trends for future distributed systems currently there are many different approaches to semantic web service descriptions and many frameworks built around them yet a common understanding evaluation scheme and test bed to compare and classify these frameworks in terms of their abilities and shortcomings is still missing semantic services challenge is an edited volume that develops this common understanding of the various technologies intended

to facilitate the automation of mediation choreography and discovery for services using semantic annotations semantic services challenge is designed for a professional audience composed of practitioners and researchers in industry professionals can use this book to evaluate sws technology for their potential practical use the book is also suitable for advanced level students in computer science
