aircraft of the royal australian air force tells the story of the raaf s first one hundred
 years by describing the acquisition operation and service record of the multitude of
 aircraft types flown by the raaf the 176 aircraft types include the flimsy wood and
 canvas aircraft typical of world war i through the technological advances during and
 after world war ii to modern fifth generation complex aircraft like the f 35 lightning ii
 even before its formation sir richard williams the father of the raaf had decided to
 employ an alpha numeric numbering system to identify and account for each aircraft in
 service this system started with a1 a2 a3 etc as each type of aircraft came into service
 each individual aircraft within each series was identified as a1 1 a1 2 and so on and
 the aircraft serial became known colloquially as the a number with some exceptions
 over the century since the a number system started aircraft entered raaf service in
 broadly the sequence of the a numbers and so this book is intended to assist in
 charting the 100 year history of the raaf by listing aircraft operated in a number
 sequence rather than by listing them by role such as fighter bomber maritime trainer
 transport etc or alphabetically by name or by manufacturer the inclusion of a

comprehensive index and the quick reference guide to aircraft by role is intended to facilitate the location of the entry for any specific type of aircraft for those who may not already know its a number aircraft of the royal australian air force is a must have for all those who have served in the raaf those with a passion for military aviation and aircraft in general and the broader members of the public wishing to gain an appreciation of the royal australian air force in its centenary year
