in this volume the third of our series the emphasis has shifted from the theoretical and experimental to the more clinical and practical aspects of alcoholism where in the earlier volumes more attention was directed to animal than human studies in this volume almost all material deals with the human condition the clinical manifestations of alcoholism may be divided into two major aspects that of the disease itself and that of its complications this separation is to some extent artificial since in a sense the natural history of the disease is a function of the development of certain complicating mechanisms these mechanisms in turn either become part and parcel of the underlying condition alcoholism or give rise to a new set of clinical variables characterized as medical complications at this point the dichotomy becomes real the disease alcoholism tends to be seen as a distinct psychosocial entity and to be treated with psychosocial techniques the medical complications are more clearly envisioned as being within the legitimate domain of medical practice and are treated by physicians who often tend to ignore the underlying alcoholism the patient is sometimes lost in between the major thrust of this volume is an attempt to describe the mechanisms of alcoholism as they are now known in such a way as to establish a continuum between the disease alcoholism and its medical complications
