In the *Philosophy of Science Fundamentals* first three volumes, the deep underlying nature of reasons and mechanisms of the creative activity of everything is described. Everything is manifested in one way or another in multi-dimensional and different qualitative macrocosmos including also qualitative base for focus dynamics of the universal structures, forms, creators, and exhibition principles of human and other self-consciousness forms in tertiary illusion. Different dimensional diapasons of all variety by continuing studying these questions in depth, the *Fundamentals* fourth volume describes the realization nature of the universe's cosmic entity and its highest collective cosmic mind, *Avatar*, and also the focus realization mechanism of its self-consciousness as the prime reason of manifestation of the universe observed by us. In the beginning of the volume, the author recalls generation principles and mechanisms of the human subjective realities, explains interconnections between the tertiary and the secondary illusions, forms, creators, while describing thoroughly fields, consciousnesses, structure, defines biodiversity and its qualitiveness types. Conception: the main part of the volume is devoted to description of the reasons and principles of the universe's cosmic entity, focus dynamics, various energy-informational structures of its self-consciousness, and also to disclosure of *four* forms, human type realization process, and form, creators, focus dynamics, amplificational aggradation process. This volume concludes with summarizing integration of everything described with information about universal cosmic laws and their principles, providing fundamental basis for generation of all self-consciousnesses forms in macrocosmos: tertiary, the secondary, and the primary illusions.

The engineer's ready reference for mechanical power and heat, mechanical engineer's handbook provides the most comprehensive coverage of the entire discipline with a focus on explanation and analysis, packaged as a modular approach. These books are designed to be used either individually or as a set, providing engineers with a thorough, detailed, ready reference on topics that may fall outside their scope of expertise. Each book provides discussion and examples as opposed to straight data and calculations, giving readers the immediate background they need while pointing them toward more in-depth information as necessary. Volume 4, *Energy and Power*, covers the essentials of fluids, thermodynamics, entropy, and heat, with chapters dedicated to individual applications such as air heating, cryogenic engineering, indoor environmental control, and more. Readers will find detailed guidance toward fuel sources and their technologies as well as a general overview of the mechanics of combustion. No single engineer can be a specialist in all areas that they are called on to work in the diverse industries and job functions they occupy. This book gives them a resource for finding the information they need with a focus on topics related to the production, transmission, and use of mechanical power and heat. Understand the nature of energy and its proper measurement and analysis. Learn how the mechanics of energy apply to furnaces, refrigeration, thermal systems, and more. Examine the pros and cons of
