over the last twenty or so years it has become standard to require policy makers to base their recommendations on evidence that is now uncontroversial to the point of triviality of course policy should be based on the facts but are the methods that policy makers rely on to gather and analyze evidence the right ones in evidence based policy nancy cartwright an eminent scholar and jeremy hardie who has had a long and successful career in both business and the economy explain that the dominant methods which are in use now broadly speaking methods that imitate standard practices in medicine like randomized control trials do not work they fail cartwright and hardie contend because they do not enhance our ability to predict if policies will be effective the prevailing methods fall short not just because social science which operates within the domain of real world politics and deals with people differs so much from the natural science milieu of the lab rather there are principled reasons why the advice for crafting and implementing policy now on offer will lead to bad results current guides in use tend to rank scientific methods according to the degree of trustworthiness of the evidence they produce that is valuable in certain respects but such approaches offer little advice about how to think about putting such evidence to use evidence based policy focuses on showing policymakers how to effectively use evidence it also explains what types of information are most necessary for making reliable policy and offers lessons on how to organize that information

relevant to and drawing from a range of disciplines the chapters in this collection show the diversity and applicability of research in bayesian argumentation together they form a challenge to philosophers versed in both the use and criticism of bayesian models who have largely overlooked their potential in argumentation selected from contributions to a multidisciplinary workshop on the topic held in sweden in 2010 the authors count linguists and social psychologists among their number in addition to philosophers they analyze material that includes real life court cases experimental research results and the insights gained from computer models the volume provides for the first time a formal measure of subjective argument strength and argument force robust enough to allow advocates of opposing sides of an argument to agree on the relative strengths of their supporting reasoning with papers from leading figures such as michael oaksford and ulrike hahn the book comprises recent research conducted at the frontiers of bayesian argumentation and provides a multitude of examples in which these formal tools can be applied to informal argument it signals new and impending developments in philosophy which has seen bayesian models deployed in formal epistemology and philosophy of science but has yet to explore the full

potential of bayesian models as a framework in argumentation in doing so this revealing anthology looks destined to become a standard teaching text in years to come
