effective decision making requires understanding of the underlying principles of financial markets and economics intellectually economics and financial markets are genetically intertwined although when it comes to popular commentary they are treated separately in fact academic economic thinking appears separate from financial market equity strategy in most financial market commentary historically macroeconomics tended to assume away financial frictions and financial intermediation whereas financial economists did not necessarily consider the negative macroeconomic spill overs from financial market outcomes in more recent years the economic discipline has gone through a serious self reflection after the global crisis this book explores the interplay

between financial markets and macroeconomic outcomes with a conceptual framework that combines the actions of investors and individuals of interest to graduate students and those professionals working in the financial markets it provides insight into why market prices move and credit markets interact and what factors participants and policy makers can monitor to anticipate market change and future price paths
