written as a training manual for chemistry based laboratory technicians this thoroughly updated fourth edition of the bestselling analytical chemistry for technicians emphasizes the applied aspects rather than the theoretical ones the book begins with classical quantitative analysis and follows with a practical approach to the complex world of so

this state of the art volume represents the first comprehensively written book which focuses on the new field of biosorption this fascinating work conveys essential fundamental information and outlines the perspectives of biosorption it summarizes the metal sorbing properties of nonliving bacterial fungal and algal biomass plus highlights relevant metal binding mechanisms this volume also discusses the aspects of obtaining and processing microbial biomass and metal chelating chemicals into industrially applicable biosorbent products microbiologists chemists and engineers with an interest in new technological and scientific horizons will find this reference indispensable

this handbook series includes several naturally occurring chemicals that exhibit biological activity these chemicals are derived from plants insects and several microorganisms volume ii of this series is devoted to methods for isolation and identification for pest control technology methods for isolation and characterization are very important for gaining knowledge on how to discover these

chemicals when present in such minute amounts ppm to ppb levels in nature several chemical and biological methods have been developed for isolation characterization and analysis of natural pesticides and are included in volume ii

trace elements occur naturally in soils and some are essential nutrients for plant growth as well as human and animal health however at elevated levels all trace elements become potentially toxic anthropogenic input of trace elements into the natural environment therefore poses a range of ecological and health problems as a result of their persistence and potential toxicity trace elements continue to receive widespread scientific and legislative attention trace elements in soils reviews the latest research in the field providing a comprehensive overview of the chemistry analysis fate and regulation of trace elements in soils as well as remediation strategies for contaminated soil the book is divided into four sections basic principles processes sampling and analytical aspects presents an overview including general soil chemistry soil sampling analysis fractionation and speciation long term issues impacts and predictive modelling reviews major sources of metal inputs the impact on soil ecology trace element deficient soils and chemical speciation modelling bioavailability risk assessment and remediation discusses bioavailability regulatory limits and cleanup technology for contaminated soils including phytoremediation and trace element immobilization characteristics and behaviour of individual elements written as an authoritative guide for scientists working in soil science geochemistry environmental science and analytical chemistry the book is also a valuable resource for professionals involved in land management environmental planning protection and regulation

case based reasoning is a methodology with a long tradition in artificial intelligence that brings together reasoning and machine learning techniques to solve problems based on past experiences or cases given a problem to be solved reasoning involves the use of methods to retrieve similar past cases in order to reuse their solution for the problem at hand once the problem has been solved learning methods can be applied to improve the knowledge based on past experiences in spite of being a broad methodology applied in industry and services case based reasoning has often been forgotten in both artificial intelligence and machine learning

books the aim of this book is to present a concise introduction to case based reasoning providing the essential building blocks for the designing of case based reasoning systems as well as to bring together the main research lines in this field to encourage students to solve current cbr challenges
