this report argues and demonstrates that the peruvian government acted in bad faith by modifying the original proposal to create the ichigkat muja national park agreed upon with the awajun and wampi s indigenous communities of the district of el cenepa department of Amazonas Peru the proposal to create a protected natural area in the cordillera del condor the traditional land of these peoples was prepared together with the environmental authority of the peruvian government through a long negotiation process and detailed scientific studies with the purpose of preserving an extremely vulnerable area at the headwaters of the cenepa river and as a result of the contribution made by the awajun and wampi s communities to the establishment of long lasting peace along the peruvian ecuadorian border the report also proves that the peruvian government acted in this manner in order to benefit mining entrepreneurs some of whom maintain strong political ties with senior government officials as a result the territory of these peoples has been threatened and their rights not to mention the national and international laws that protect them have been challenged the awajun and wampi s communities and their representative organizations have continuously demanded the following the reestablishment of the original proposal to create the national park and the cancelation of mining concessions neither have been granted by authorities this situation serves as a basis for the claims made by the indigenous movement that led to massive demonstrations in 2008 and 2009 in addition to a prolonged strike which culminated in the bloody events of Bagua June 5 2009 when the government violently intervened to evacuate the awajun and wampi s contingents that had blocked a highway

technocratic visions examines the context and societal consequences of technologies technocratic governance and development in Mexico home of the first professional engineering school in the Americas contributors focus on the influential role of engineers especially civil engineers but also mining engineers military engineers architects and other infrastructural and mechanical technicians

during the mid nineteenth century a period of immense upheaval and change domestically and globally troubled governments attempted to expand and modernize Mexico's engineering programs while resisting foreign invasion and adapting new western technologies to existing precolonial and colonial foundations the Mexican revolution in 1910 greatly expanded technocratic practices as state agents attempted to control popular unrest and unify disparate communities via science education and infrastructure within this backdrop of political unrest technocratic visions describes engineering sites as places both praised and protested where personal local national and global interests combined into new forms of societal creation and as places that became centers of contests over representation health identity and power with an eye on contextualizing current problems stemming from Mexico's historical development this volume reveals how these transformations were uniquely Mexican and thoroughly global

after many years of geographical and bibliographical journeys William Panczner has completed a project that many of us would have loved to initiate but did not undertake because of its magnitude and intrinsic complexity not since L. Salazar Salinas who is credited with authoring *Boletín de los Minerales de México* 1922-1923 has an author been able to provide readers with a comprehensive volume containing information that is both authentic and reliable on Mexican mineralogy mineral species and localities this volume is the most complete synthesis about Mexican minerals and their occurrences to date it is richly illustrated with photographs and drawings is well documented and is organized into four sections making it easy to use and enjoyable to read the introduction contains an interesting summary of the mining history and the development of mineralogy it also describes in a condensed but accurate and stimulating manner the geography and the mineralogy of the country dividing it into eleven mineral provinces the author discusses eight of the more important mining districts in Mexico which produce fine mineral specimens there is also a chronology of historical geological and mineralogical events in Mexico this is followed by a bibliography with over 500 references on the subject

reviews the mineral and material industries of the united states and foreign countries contains statistical data on materials and minerals and includes information on economic and technical trends and development includes chapters on approximately 90 commodities and over 175 countries
