this thesis describes novel devices for the secure identification of objects or electronic systems the identification relies on the the atomic scale

uniqueness of semiconductor devices by measuring a macroscopic quantum property of the system in question traditionally objects and electronic systems have been securely identified by measuring specific characteristics common examples include passwords fingerprints used to identify a person or an electronic device and holograms that can tag a given object to prove its authenticity unfortunately modern technologies also make it possible to circumvent these everyday techniques variations in quantum properties are amplified by the existence of atomic scale imperfections as such these devices are the hardest possible systems to clone they also use the least resources and provide robust security hence they have tremendous potential significance as a means of reliably telling the good guys from the bad

the fuzzy set was conceived as a result of an attempt to come to grips with the problem of pattern recognition in the context of imprecisely defined categories in such cases the belonging of an object to a class is a matter of degree as is the question of whether or not a group of objects form a cluster a pioneering application of the theory of fuzzy sets to cluster analysis was made in 1969 by ruspini it was not until 1973 however when the appearance of the work by dunn and bezdek on the fuzzy isodata or fuzzy c means algorithms became a landmark in the theory of cluster analysis that the relevance of the theory of fuzzy sets to cluster analysis and pattern recognition became clearly established since then the theory of fuzzy clustering has developed rapidly and fruitfully with the author of the present monograph contributing a major share of what we know today in their seminal work bezdek and dunn have introduced the basic idea of determining the fuzzy clusters by minimizing an appropriately defined functional and have derived iterative algorithms for computing the membership functions for the clusters in question the important issue of convergence of such algorithms has become much better understood as a result of recent work which is described in the monograph
