some building codes require wood shingles to be fire retardant treated because exterior fire retardant treatments are subjected to weathering treatment durability and leach resistance are critical for insuring adequate fire protection we examined the effectiveness of various

fire retardant treatments on wood after 0 2 5 and 10 years of outdoor exposure we used a class c burning brand test astm e 108 and a schlyter flamespread test to evaluate effectiveness most shingle treatments evaluated were either pressure impregnated or coated at the forest products laboratory however a commercial treatment was used as a control after 10 years of exposure most treatments passed the class c burning brand test but lost considerable effectiveness in the schlyter test method the commercial treatment was the most effective after 10 years of weathering
