the text has been divided in two volumes volume i ch 1 13 volume ii ch 14 22 in addition to the review material and some basic topics as discussed in the opening chapter the main text in volume i covers topics on infinite series differential and integral calculus matrices vector calculus ordinary differential equations special functions and laplace transforms volume ii covers topics on complex analysis fourier analysis partial differential equations and statistics the present book has numerous distinguishing features over the already existing books on the same topic the chapters have been planned to create interest among the readers to study and apply the mathematical tools the subject has been presented in a very lucid and precise manner with a wide variety of examples and exercises which would eventually help the reader for hassle free study

whole system design is increasingly being seen as one of the most cost effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system a focus on design is critical as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life which can span from a few years to many decades indeed it is now widely acknowledged that all designers particularly engineers architects and industrial designers need to be able to understand and implement a whole system design approach this book provides a clear design methodology based on leading efforts in the field and is supported by worked examples that demonstrate how advances in energy materials and water productivity can be achieved through applying an integrated approach to sustainable engineering chapters 1 5 outline the approach and explain how it can be implemented to enhance

the established systems engineering framework chapters 6 10 demonstrate through detailed worked examples the application of the approach to industrial pumping systems passenger vehicles electronics and computer systems temperature control of buildings and domestic water systems published with the natural edge project the world federation of engineering organizations unesco and the australian government
